

# Remote Emulation with the R&S®SMBV100B Vector Signal Generator

## Application Note

### Products:

- | R&S®SMBV100B

The R&S®SMBV100B vector signal generator offers a remote emulation feature that makes it possible to control the instrument by commands other than the built-in native SCPI commands. This feature allows the user to replace signal generators, e.g. from other manufacturers, with the R&S®SMBV100B without having to change the remote control code.

This application note describes how to use the remote emulation feature in general. Furthermore, it describes in detail the remote emulation for each supported instrument, limitations of the individual emulations and the remaining differences between the emulated and the original commands.

# 1 Abbreviations

The following abbreviations are used in this application note:

- AF2023 2023 signal generator from Aeroflex / IFR / Marconi
- AF2024 2024 signal generator from Aeroflex / IFR / Marconi
- AF2030 2030 signal generator from Aeroflex / IFR / Marconi
- AF2031 2031 signal generator from Aeroflex / IFR / Marconi
- AF2032 2032 signal generator from Aeroflex / IFR / Marconi
- AF2040 2040 signal generator from Aeroflex / IFR / Marconi
- AF2041 2041 signal generator from Aeroflex / IFR / Marconi
- AF2042 2042 signal generator from Aeroflex / IFR / Marconi
- AF2050 2050 signal generator from Aeroflex / IFR / Marconi
- AF2051 2051 signal generator from Aeroflex / IFR / Marconi
- AF2052 2052 signal generator from Aeroflex / IFR / Marconi
- AF3416 3416 signal generator from Aeroflex / IFR / Marconi
- AN68017 68017 signal generator from Anritsu
- AN68037 68037 signal generator from Anritsu
- E4428 E4428 signal generator from Agilent Technologies
- E4438 E4438 signal generator from Agilent Technologies
- E8257 E8257 signal generator from Agilent Technologies
- E8663 E8663 signal generator from Agilent Technologies
- N5181 N5181 signal generator from Agilent Technologies
- N5182 N5182 signal generator from Agilent Technologies
- N5172 N5172 signal generator from Agilent Technologies
- N5173 N5173 signal generator from Agilent Technologies
- 83620 83620 signal generator from Agilent Technologies
- 83630 83630 signal generator from Agilent Technologies
- 83640 83640 signal generator from Agilent Technologies
- 83650 83650 signal generator from Agilent Technologies
- HP8340 8340 signal generator from Hewlett-Packard / Agilent Technologies
- HP8341 8341 signal generator from Hewlett-Packard / Agilent Technologies
- HP8642 8642 signal generator from Hewlett-Packard / Agilent Technologies
- HP8643 8643 signal generator from Hewlett-Packard / Agilent Technologies
- HP8644 8644 signal generator from Hewlett-Packard / Agilent Technologies
- HP8645 8645 signal generator from Hewlett-Packard / Agilent Technologies
- HP8647 8647 signal generator from Hewlett-Packard / Agilent Technologies
- HP8648 8648 signal generator from Hewlett-Packard / Agilent Technologies
- HP8656 8656 signal generator from Hewlett-Packard / Agilent Technologies
- HP8657 8657 signal generator from Hewlett-Packard / Agilent Technologies
- HP8662 8662 signal generator from Hewlett-Packard / Agilent Technologies
- HP8664 8664 signal generator from Hewlett-Packard / Agilent Technologies
- HP8665 8665 signal generator from Hewlett-Packard / Agilent Technologies
- HP8673 8673 signal generator from Hewlett-Packard / Agilent Technologies
- RC3102 3102 signal generator from Racial-Dana
- RC9087 9087 signal generator from Racial-Dana

- SMBV100A R&S®SMBV100A signal generator from Rohde & Schwarz
- SMBV100B R&S®SMBV100B signal generator from Rohde & Schwarz
- SML R&S®SML signal generator from Rohde & Schwarz
- SMT R&S®SMT signal generator from Rohde & Schwarz
- SMY R&S®SMY signal generator from Rohde & Schwarz

## 2 Overview

Measuring instruments used in commercial test systems for applications such as testing of mobile radio base stations typically have a much longer lifespan than the test system itself. Some five to seven years of usage is normal prior to replacement. On the other hand, test systems for use in aerospace & defense applications can have a typical lifespan of 25 years or even more. If standard measuring instruments with a lifespan that is significantly less than this time frame are used in such test systems, an obvious question is how to handle maintenance, repair, calibration and even replacement of the instruments that are no longer supported by their manufacturer. Moreover, the test program sets used in such test systems are generally certified, which makes it very time-consuming and costly to modify and reaccept them.

A feasible strategy to solve this problem is the migration with new measuring instruments that emulate the discontinued instruments.

This migration approach is saves time and is cost-effective. It involves replacing obsolete measuring instruments with new ones that emulate their functionality and programming.

The requirements for the new instruments revolve around the electrical and functional features of the instruments to be emulated as well as the test programs, which ideally should not require any modifications.

To fulfill the last requirement, the SMBV100B offers the remote emulation feature.

Remote emulation means that the SMBV100B will understand the programming commands of the emulated instrument and also emulate the behavior as fully as possible.

Most instruments from other manufacturers in the category of the SMBV100B are emulated by the SMBV100B. An overview of actually implemented remote emulations is given in the following table:

Remote emulations in the SMBV100B			
Manufacturer	Instrument	Language	Section
Aeroflex IFR Marconi	AF2023	SCPI	5
	AF2024		
	AF2030	SCPI	6
	AF2031		
	AF2032		
	AF2040

## 3 Basics

### 3.1 Remote Control Languages

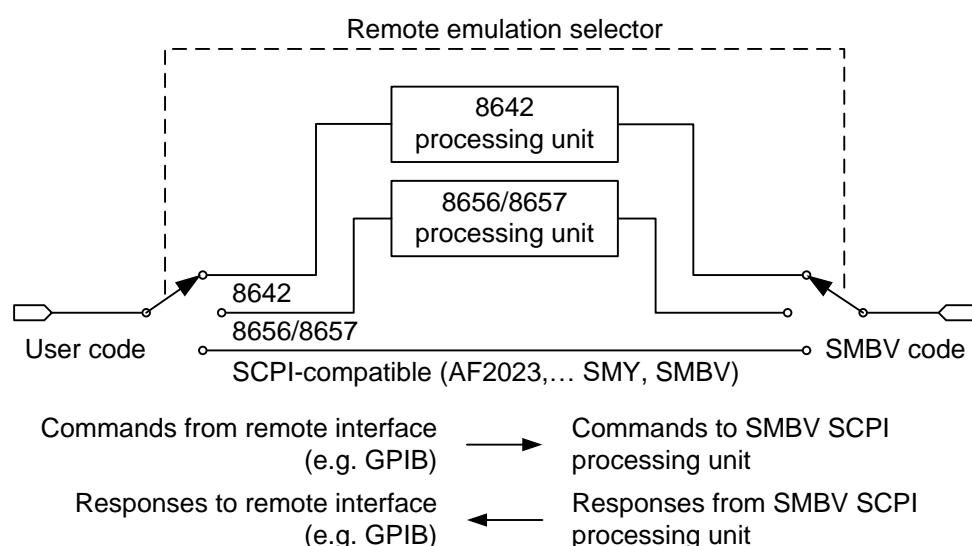

Instruments implement different kind of remote control languages. These languages are grouped into two basic categories:

- SCPI-compatible
- Non-SCPI-compatible

Command examples				
Function	HP8642 Non-SCPI	HP8657 Non-SCPI	AF2023 SCPI	SMBV100B SCPI
Resetting the instrument	PR	PR	*RST	*RST
Clearing the system status		CS	*CLS	*CLS
Setting the RF frequency	CW10MZ	FR10MZ	:CFRQ:VALUE 10MHZ	:FREQ 10MHZ
Setting the RF power	AP-10DB	PL-10DM	:RFLV:VALUE -10DBM	:POW -10DBM
Activating the RF output	ON	R3	:RFLV:ON	:OUTP 1

Older instruments often implement a simple, unstructured and non-SCPI-compatible language, whereas modern instruments implement usually a complex, well structured and SCPI-compatible language.

The SMBV100B offers a solution for both kinds of languages using specialized processing units in non-SCPI-compatible languages:

### 3.1.1 SCPI-Compatible Languages

Commands are routed directly from the remote interface to the SMBV100B SCPI command processing unit; responses are routed in the reverse direction.

### 3.1.2 Non-SCPI-Compatible Languages

Commands are routed from the remote interface to the SMBV100B SCPI command processing unit through a remote emulation specific processing unit; responses are routed in the reverse direction.

This specific processing unit parses the non-SCPI-compatible commands with reference to the corresponding syntax and translates them into SCPI-compatible ones. The unit also reformats the responses with respect to the requirements of the emulated instrument.

## 3.2 Remote Emulation Compatibility

An emulated instrument having fewer features than, or the same features as, the SMBV100B can be replaced without special care.

However, replacing an emulated instrument having more features than the SMBV100B or features that differ from those of the SMBV100B requires additional care. The user must

- ensure that the SMBV100B complies with the functional requirements
- verify that application code does not use features in the emulated instrument which are not available in the SMBV100B

### 3.2.1 Command Compatibility

Most of the remote emulations in the SMBV100B implement all commands of the original instrument. However, e.g. due to functional differences in hardware, in certain remote emulations the SMBV100B

- does not support all commands
- does not support all parameters of a command
- implements a different behavior for a command

In the command tables of the different remote emulations, the status column gives compatibility information to a command:

Command compatibility status	
Status	Comment
✓	Command implementation is fully compatible.

Command compatibility status	
Status	Comment
 See item n	<p>Command implementation is not fully compatible. The implementation in the SMBV100B</p> <ul style="list-style-type: none"> <li>• does not support the same parameter(s) as the emulated instrument does</li> <li>• has different functionality than the emulated instrument</li> <li>• reports an invalid parameter or execution error if possible</li> </ul>
	<p>Command is implemented without any functionality. The implementation in the SMBV100B</p> <ul style="list-style-type: none"> <li>• ignores setting commands</li> <li>• returns default value in query commands</li> <li>• does not report errors</li> <li>• does not change any operating mode of the instrument</li> <li>• does not change any system state of the instrument</li> </ul>
	Command is not implemented. The implementation in the SMBV100B reports an unknown command error if possible.
	Command has been added to enhance the functionality of the emulated instrument.

If the application software uses commands that are fully compatible, no special care has to be taken. The applications software can be used as is.

If the application software uses commands that are not fully compatible, the application software must be verified and normally also modified. If the required modifications to the application software are infeasible, the SMBV100B cannot be used as replacement for another instrument.

### 3.2.2 IDN / OPT Strings

The remote emulation provides user-defined responses to \*IDN? and \*OPT? queries. This feature is of informational character only and has no impact on the functionality of the SMBV100B.

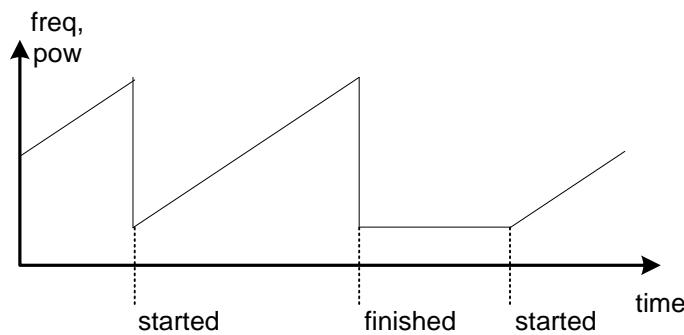

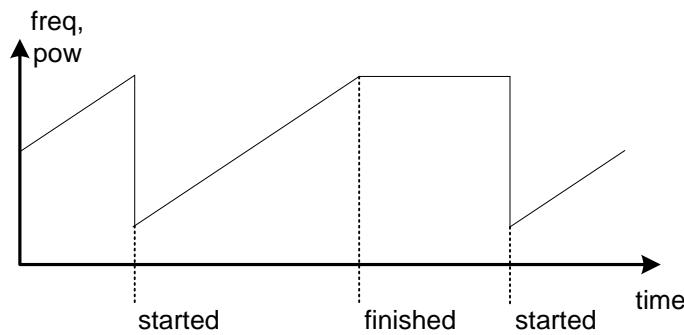

### 3.2.3 Timing

The remote emulation cannot provide exact timing compatibility with the emulated instrument, since timing is a hardware-related property.

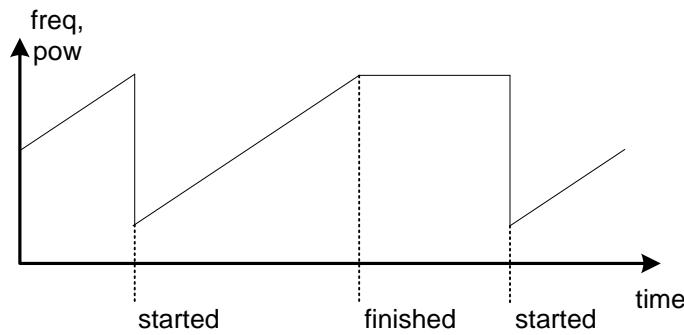

### 3.2.4 Sweep Operation

In the different sweep operating modes, often the behavior when a sweep has finished can be configured.

In some of the emulated instruments, the corresponding signal can be configured to remain at the stop value (upper figure) or to retrace to the start value (lower figure):

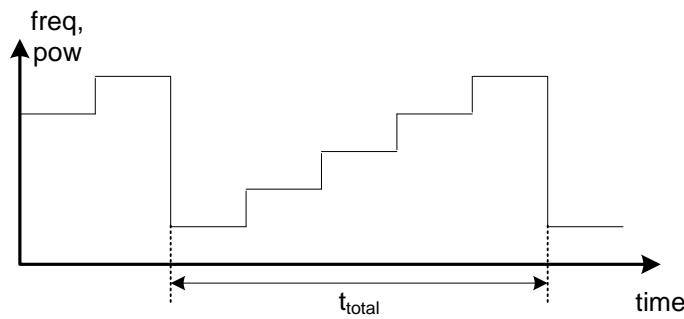

In the SMBV100B, however, the corresponding signal always remains at the stop value:

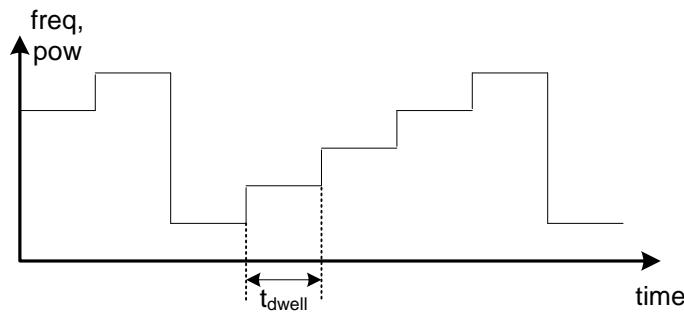

If this feature is undesirable, the user application code has to be changed.

Some of the emulated instruments implement sweep operations with a constant total sweep time:

Changing the start, stop or steps parameter of the sweep operation does not have an impact on the total sweep time.

In the SMBV100B, all sweep operations are based on the dwell time:

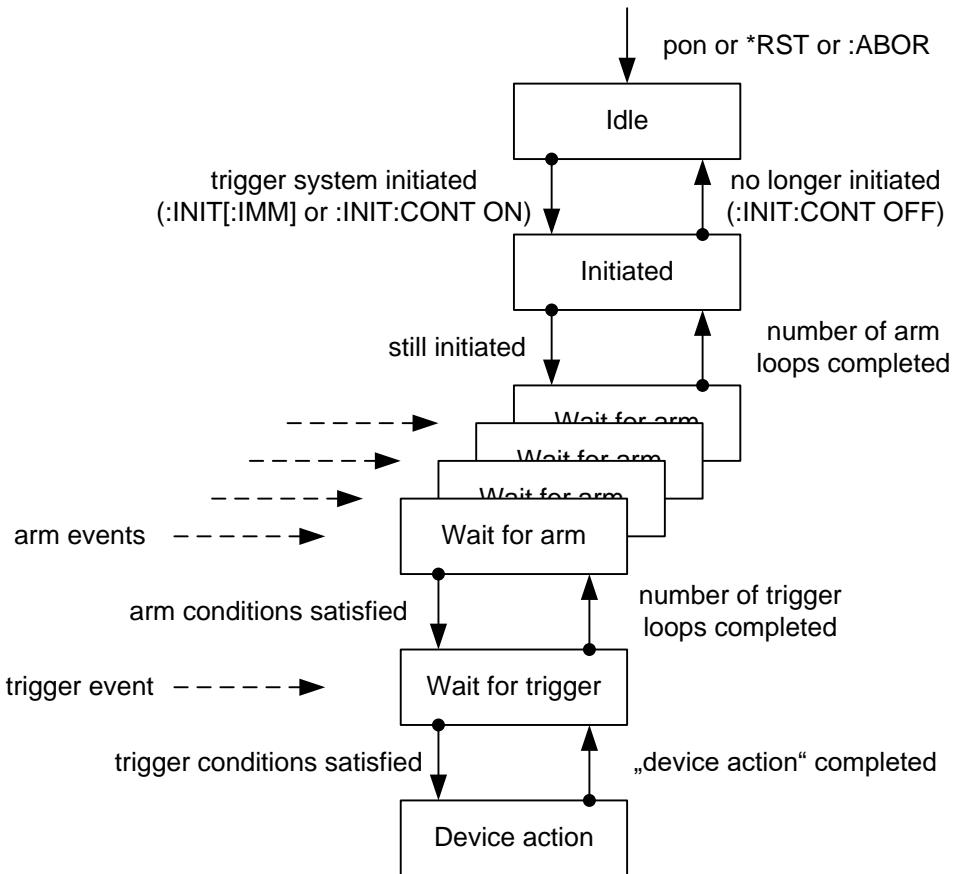

Changing the start, stop or steps parameter directly affects the total sweep time.

$$n_{steps} = \left\lceil \frac{f_{stop} - f_{start}}{f_{step}} \right\rceil + 1$$

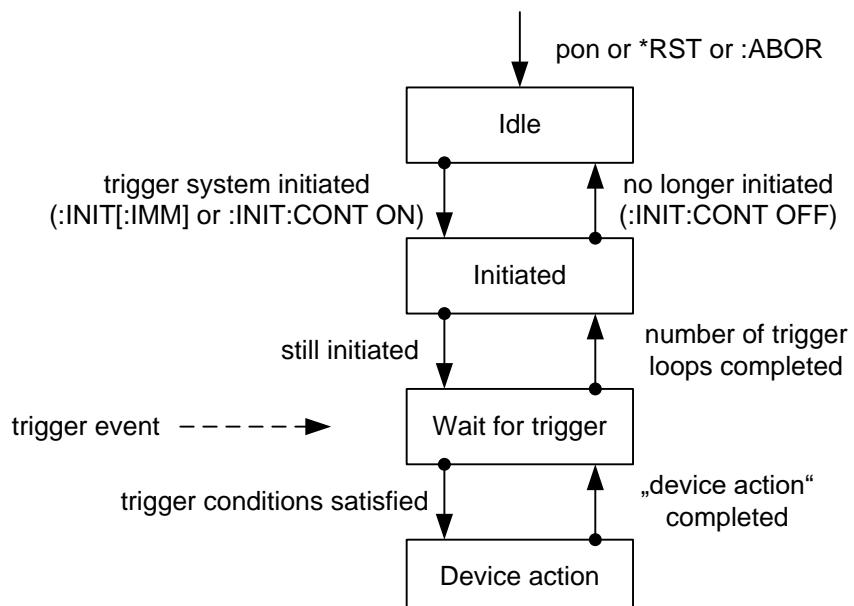

$$t_{total} = n_{steps} \cdot t_{dwell}$$

### 3.2.5 Trigger Control

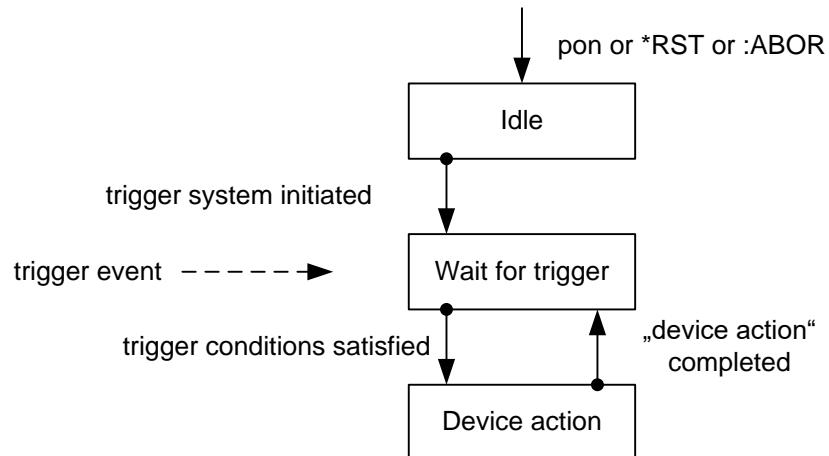

In signal generators with sweeping features, all sweep operating modes use the trigger control system. The figure below shows the SCPI trigger control system proposal:

Some of the emulated instruments implement a simplified trigger control system:

Other emulated instruments and also the SMBV100B implement the trigger control system shown in the following figure:

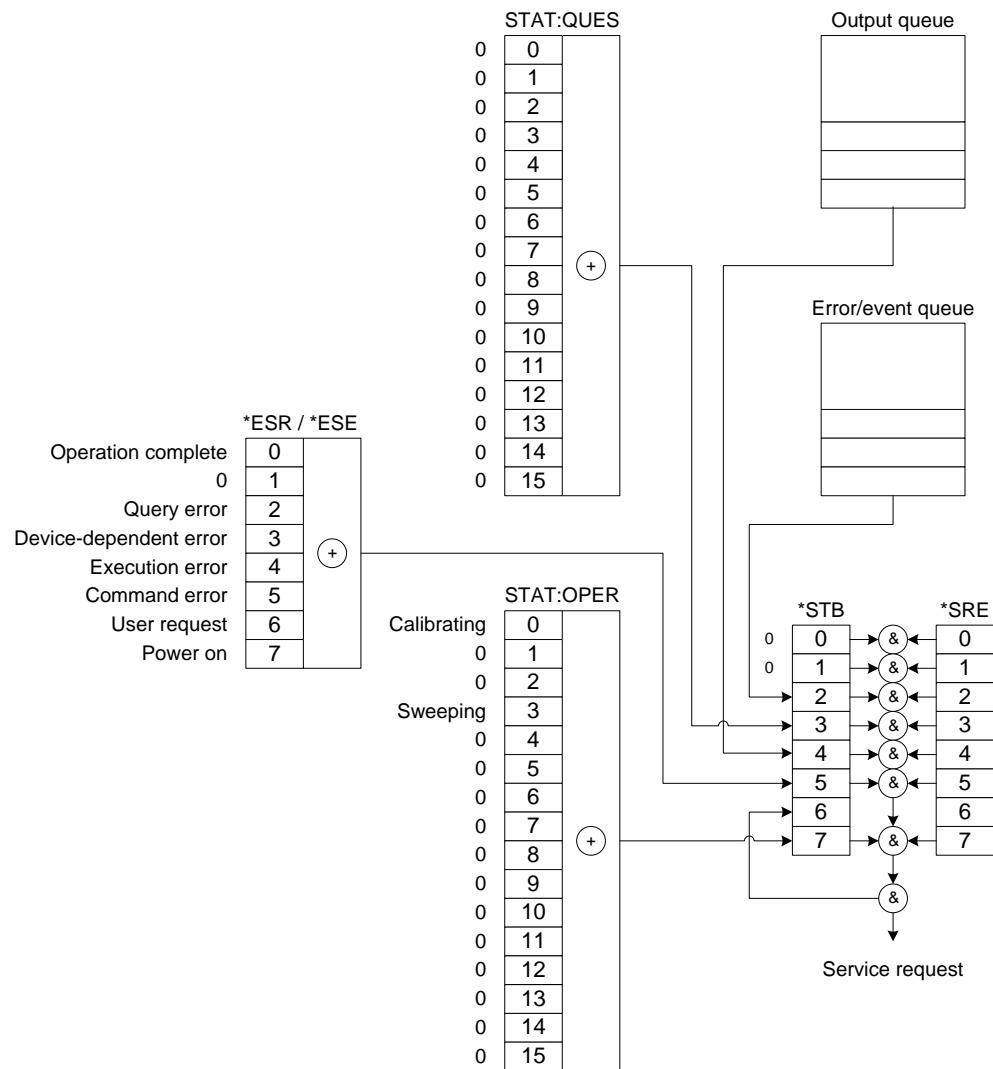

The main difference between the emulated instrument's and the SMBV100B's trigger control system is that there is no "Initiated" state in the SMBV100B. The SMBV100B implementation assumes that the trigger system is initiated automatically in the "Idle" state. As a result, any sweep operation in the SMBV100B, once activated, can only be controlled by internal or external trigger events.

This has an important impact on the user application. Application code that requires an "Initiated" state in the trigger control system must be adapted.

### 3.2.6 Status and Error Reporting

The SMBV100B implements the minimal status and error reporting system required by the SCPI proposal. The following figure shows the status and error reporting model:

Some of the emulated instruments implement a more detailed status and error reporting system. Since the additional information stored in that system is not available in the SMBV100B, application code that uses the additional information must be changed.

### 3.3 Preset / Reset

Changing the remote emulation does not automatically trigger a reset operation to the instrument. Therefore it is strongly recommended to manually execute a reset to the SMBV100B after changing the remote emulation.

To apply the default of a particular remote emulation, the user must send the corresponding command via the remote control interface, e.g. the \*RST command in SCPI-compatible languages.

## 3.4 Power Down / Power Up

The selected remote emulation and the user-defined responses to \*IDN? and \*OPT? queries are saved when the instrument is switched off.

When the instrument is switched on again, it starts up with the same settings that were active before it was switched off.

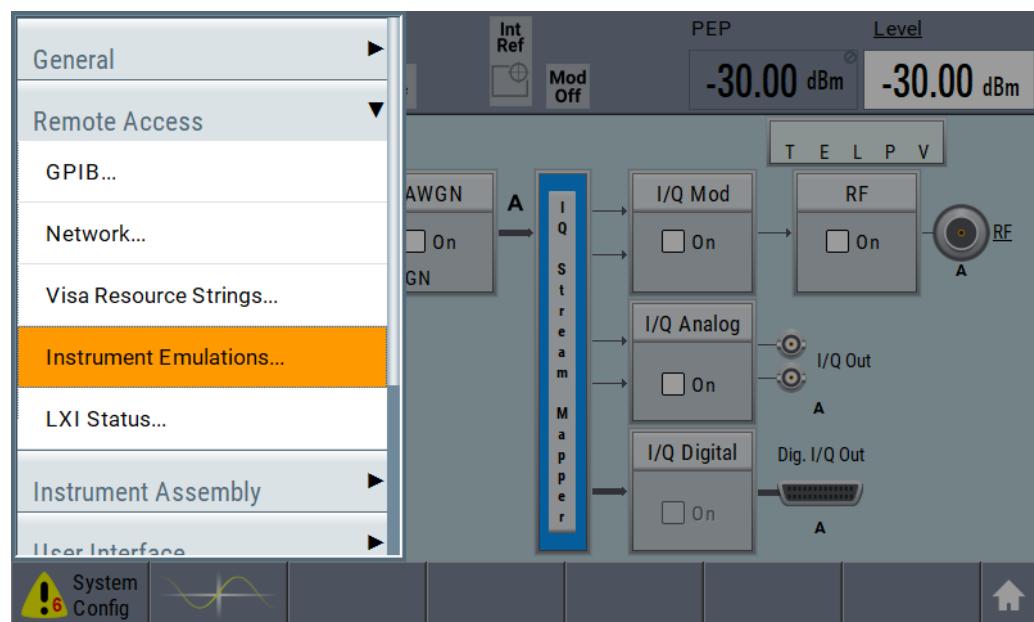

## 4 Activating a Remote Emulation

In order to use a specific remote emulation, it must first be activated by the user. Activation is done either

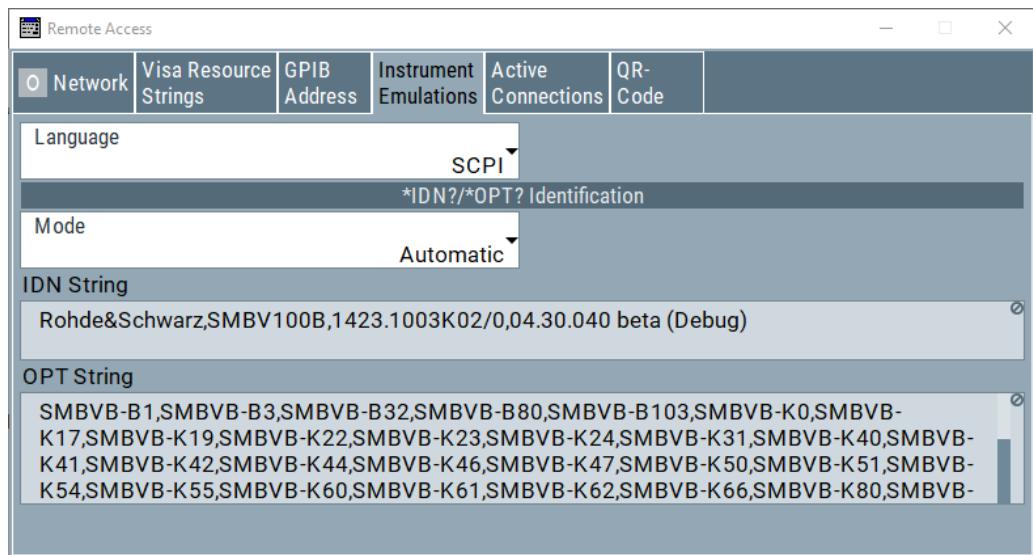

- manually using the SMBV100B front panel
- remotely using SCPI commands

### 4.1 Manual Operation

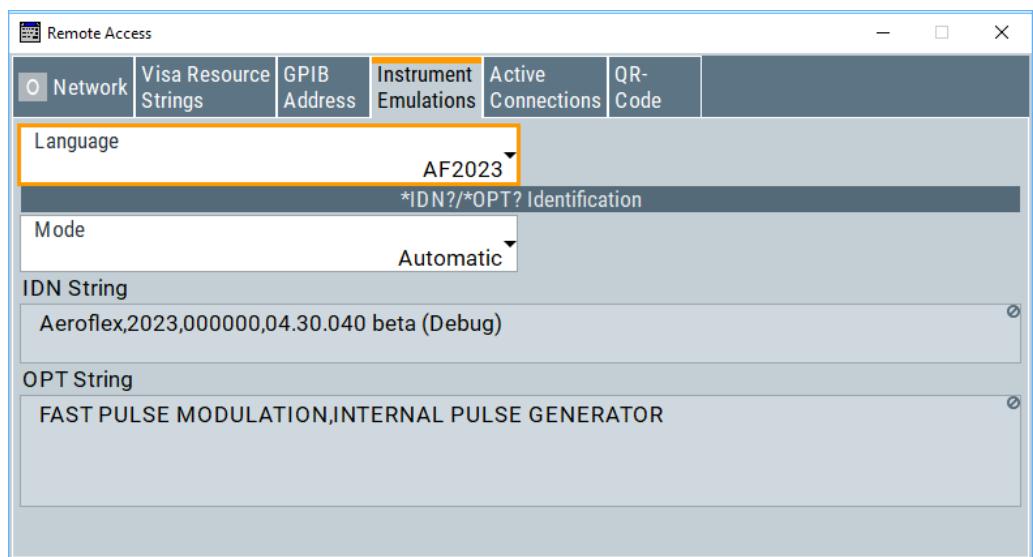

On the SMBV100B front panel, press the SETUP key to open the Menu tree:

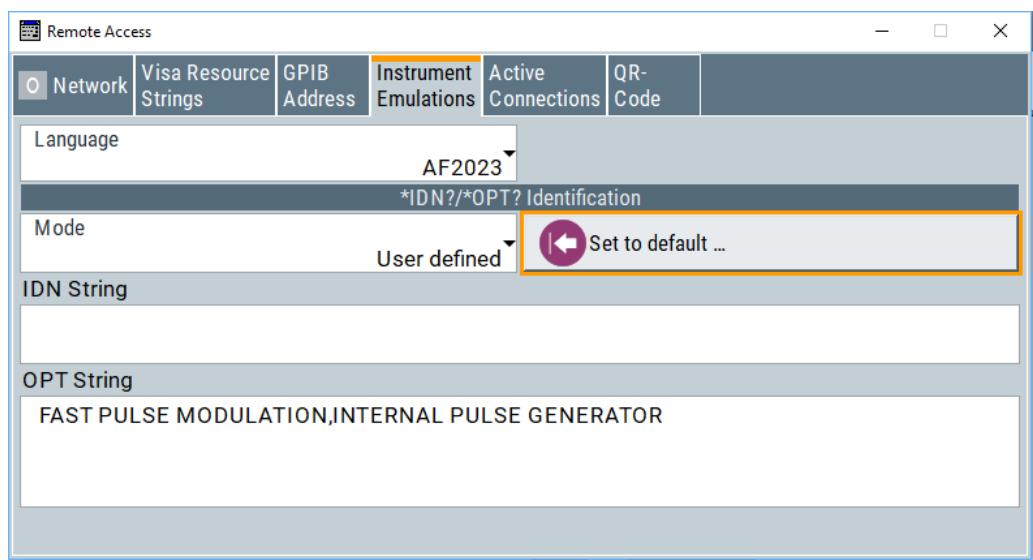

In the Menu tree, select Remote Access... and open the Instrument Emulations tab.  
 In the dialog, set up the remote emulation specific parameters:

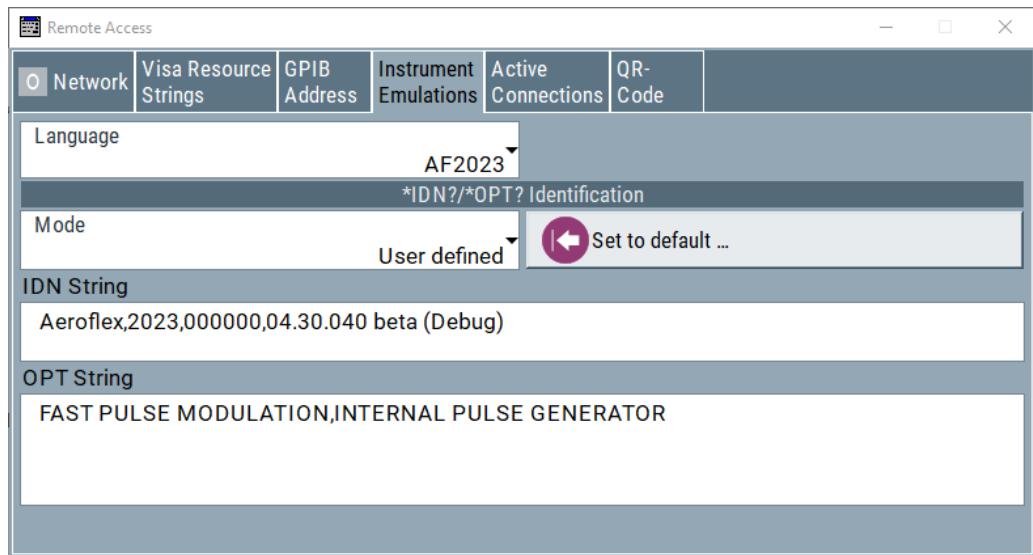

Select the Language and open the drop-down list. Pick an item from the list and confirm the selection:

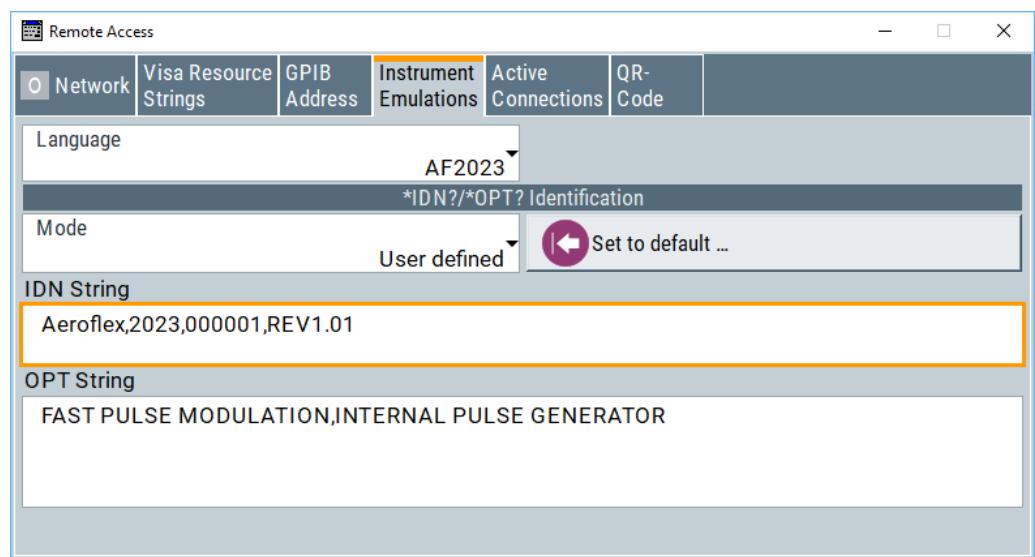

Select the Mode and open the drop-down list. Pick either “Automatic” or “User defined” from the list and confirm the selection. In “Automatic” mode, the response text to \*IDN? and \*OPT? queries is generated by the signal generator itself. In “User defined” mode, the response text to \*IDN? and \*OPT? queries must be entered in the corresponding IDN string and/or OPT string text boxes:

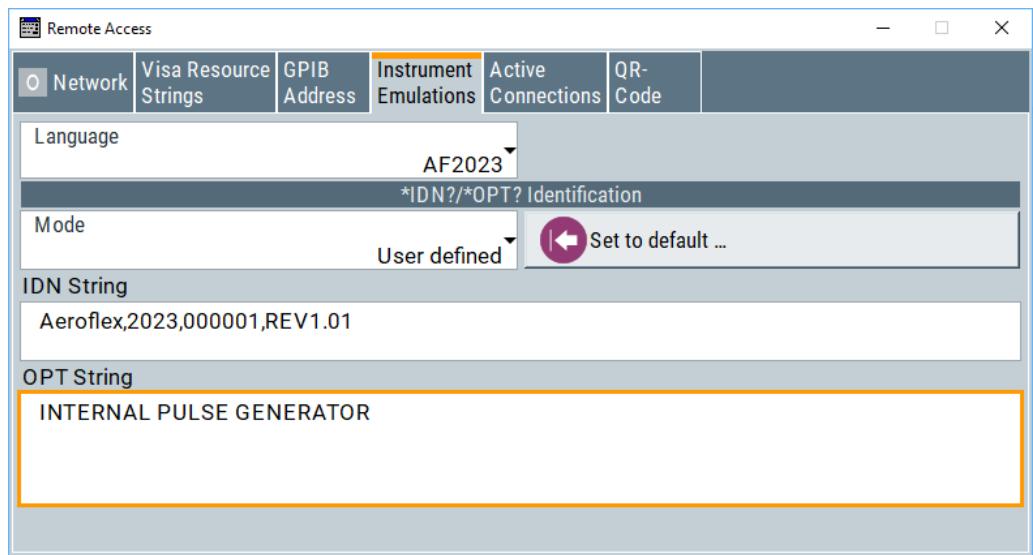

In “User defined” mode, press the “Set to default...” button to preset the corresponding IDN string and/or OPT string text boxes with the default settings from the selected remote emulation:

Then select the IDN String text box and edit the response text to \*IDN? queries. When finished, confirm the text:

Finally select the OPT String text box and edit the response text to \*OPT? queries. When finished, confirm the text:

## 4.2 Remote Operation

When the SMBV100B uses a non-SCPI-compatible language, the remote emulation cannot be changed remotely. The emulation needs to be changed manually.

When the SMBV100B uses an SCPI-compatible language, use the following commands to modify the remote emulation parameters:

Commands to modify remote emulation relevant settings	
Command	Comment
:SYSTem:IDENt <value>	Sets the state of the identification mode. If the identification mode is set to USER, the value provided with the command :SYSTem:IDN <value> is returned on an *IDN? query and the value provided with the command :SYSTem:OPT <value> is returned on *OPT? query. If the identification mode is set to AUTO, the factory default setting is returned on a *IDN? query or an *OPT? query. The value range of character-type parameter <value> is <ul style="list-style-type: none"> <li>• AUTO</li> <li>• USER</li> </ul>
:SYSTem:IDEN?	Gets the state of the identification mode.
:SYSTem:IDN <value>	Sets the user-defined response to an *IDN? query. The string-type parameter <value> allows up to 128 characters. The parameter has to be enclosed in single or double quotes.
:SYSTem:IDN?	Gets the user-defined response to an *IDN? query.
:SYSTem:OPT <value>	Sets the user-defined response to a *OPT? query. The string-type parameter <value> allows up to 128 characters. The parameter has to be enclosed in single or double quotes.
:SYSTem:OPT?	Gets the user-defined response to a *OPT? query.

Commands to modify remote emulation relevant settings	
Command	Comment
:SYSTem:LANGuage <value>	<p>Activates the remote emulation to be used for further communications. The value range of the string-type parameter &lt;value&gt; is:</p> <ul style="list-style-type: none"> <li>• “AF2023”, “AF2024”</li> <li>• “AF2030”, “AF2031”, “AF2032”, “AF2040”, “AF2041”, “AF2041(ILS)”, “AF2041(VOR)”, “AF2042”, “AF2050”, “AF2051”, “AF2052”</li> <li>• “AF3416”</li> <li>• “AN68017”, “AN68037”</li> <li>• “E4428”, “E4438”</li> <li>• “N5181”, “N5182”, “N5172B”, “N5173”</li> <li>• “HP8642”</li> <li>• “HP8643”, “HP8643”, “HP8644”, “HP8664”, “HP8665”</li> <li>• “HP8647”, “HP8648”</li> <li>• “HP8656”, “HP8657”</li> <li>• “PA8303”</li> <li>• “RC3102”, “RC9087”</li> <li>• “SMBV100A”</li> <li>• “SML01”, “SML02”, “SML03”</li> <li>• “SMT03”</li> <li>• “SMY01”, “SMY02”</li> <li>• “EXIT”</li> </ul> <p><b>Attention:</b> The remote emulation is changed immediately after parsing this command. Succeeding commands such as *WAI, *OPC or *OPC? are not allowed, since these commands may not be a part of the newly selected command set.</p> <p><b>Therefore, this command must be the one and only command in a program message unit.</b></p> <p>After sending this command, a delay of two seconds must be applied to the application software before the next command is sent. The parameter value “EXIT” must be used to return to the native SCPI command set of the instrument.</p>
:SYSTem:LANGuage?	Gets the current active remote emulation.

Note:

The upper-case and lower-case notation serves to distinguish between the long and the short form of a command. The instrument itself does not distinguish between upper-case and lower-case notation.

## 5 Emulating the Aeroflex 2023/2024

The following tables show the current implementation status of each command. Commands not shown in these tables are not supported.

[ <b>:SOURce:</b> ]SWEep<n>:TIME:LLIMit value	x

## 9 Emulating the Agilent E4428, E4438

The file system implemented in the E4428 / E4438 is not compatible with the file system implemented in the SMBV100B. The SMBV100B does not support RAM-based file storage; all file contents are stored persistently.

Furthermore, the E4428 / E4438 directory tree is not compatible with the SMBV100B directory tree. The following tables show the mapping of the E4428 / E4438 directory tree to the SMBV100B directory tree:

Directory tree mapping	
E4428 / E4438	SMBV100B
/user/list/	/var/user/
/user/userflat/	/var/user/

When E4428 / E4438 remote application is applied, the corresponding SMBV100B directory tree is created automatically.

The file format of the E4428 / E4438 differs from the SMBV100B file format. Therefore,

- E4428 / E4438 formatted files must not be transferred via FTP or USB memory to the SMBV100B.
- E4428 / E4438 formatted files must be transferred via remote interface, since the remote emulation performs the required conversion to the SMBV100B file format.

The following tables show the current implementation status of each command. Commands not shown in these tables are not supported.

## 10 Emulating the Agilent N5181, N5182, N5172, N5173

The file system implemented in the N5181 / N5182 / N5172 / N5173 is not compatible with the file system implemented in the SMBV100B. The SMBV100B does not support RAM-based file storage; all file contents are stored persistently.

Furthermore, the N5181 / N5182 / N5172 directory tree is not compatible with the SMBV100B directory tree. The following tables show the mapping of the N5181 / N5182 / N5172 / N5173 directory tree to the SMBV100B directory tree:

Directory tree mapping	
N5181 / N5182	SMBV100B
/user/list/	/var/user/
/user/userflat/	/var/user/

When N5181 / N5182 / N5172 / N5173 remote application is applied, the corresponding SMBV100B directory tree is created automatically.

The file format of the N5181 / N5182 / N5172 / N5173 differs from the SMBV100B file format. Therefore,

- N5181 / N5182 / N5172 / N5173 formatted files must not be transferred via FTP or USB memory to the SMBV100B.
- N5181 / N5182 / N5172 / N5173 formatted files must be transferred via remote interface, since the remote emulation performs the required conversion to the SMBV100B file format.

The following tables show the current implementation status of each command. Commands not shown in these tables are not supported.

# 11 Emulating the Agilent E8257, E8663

The remote emulation E8257 / E8663 is available only if one of the following options is installed:

- SMBVB-B103 Frequency: 8 kHz to 3 GHz (mandatory)
- SMBVB-KB106 Frequency Extension to 6 GHz

The following tables show the current implementation status of each command. Commands not shown in these tables are not supported.

The contents of the registers 0 to 99 are NOT persistent and are lost when power is switched off or when leaving the emulation mode.	

## 22 Emulating the R&S®SMBV100A

The SMBV100B and SMBV100A SCPI command sets are largely compatible, even without activating the SMBV100A emulation mode. Differences are due to the SMBV100B multi-purpose USER1...User5 connectors and concern central instrument functions, not the digital standards. Some other special functions are not available anymore.

Here is a list of SMBV100A commands not supported or implemented differently in the SMBV100B.

Device-specific functions	
Command syntax	Status
:BERT BLER:SEQUence value <b>Remark:</b> Use :BERT BLER:TRIGger:MODE	x
:BERT BLER:SETup:CLOCK[:POLarity] value :BERT BLER:SETup:DATA:CONNector value :SOURce:INPut:BERT:IMPedance value :SOURce:INPut:BERT:THreshold value <b>Remark:</b> See "Show SCPI Command" context menu under Global Connectors for replacements.	x
:SOURce:BB:GRAPhics:SMART:STATe value :SOURce:BB:GRAPhics:STATE value <b>Remark:</b> Use [:SOURce]:BB:GRAPhics:ADD value	x

## 28 Ordering Information

Please visit the following website for comprehensive ordering information for the SMBV100B:

[Ordering Information for the R&S®SMBV100B Vector Signal Generator](#)

R&S®SMBV100B	Base unit	1423.1003.02
R&S®SMBVB-B103	Frequency options 8 kHz to 3 GHz (mandatory)	1423.6270.02
R&S®SMBVB-KB106	Frequency Extension to 6 GHz	1423.6370.02
R&S®SMBVB-B1	RF options OCXO Reference Oscillator	1423.6470.02
R&S®SMBVB-B1H	High Performance OCXO Reference Oscillator	1423.6570.02
R&S®SMBVB-B3	1 GHz Reference Input/Output	1423.7260.02
R&S®SMBVB-K704	Flexible Reference Input from 1 MHz to 100 MHz	1423.7618.02
R&S®SMBVB-K31	High Output Power	1423.6670.02
R&S®SMBVB-B32	Ultra High Output Power	1423.6711.02
R&S®SMBVB-K90	Phase Coherence	1423.7076.02
R&S®SMBVB-K22	Pulse Modulator	1423.7560.02
R&S®SMBVB-K23	Pulse Generator	1423.7576.02
R&S®SMBVB-K24	Multifunction Generator	1423.7582.02
R&S®SMBVB-K720	AM/FM/fM	1423.7599.02
R&S®SMBVB-K17	Baseband Differential Analog I/Q Outputs	1423.7624.02

R&S®SMBVB-K511	ARB Memory Extension to 256 Msample	1423.7653.02
R&S®SMBVB-K512	ARB Memory Extension to 1 Gsample	1423.7660.02
R&S®SMBVB-K513	ARB Memory Extension to 2 Gsample	1423.8589.02
R&S®SMBVB-K520	Baseband Realtime Extension	1423.7676.02
R&S®SMBVB-K523	Baseband Extension to 240 MHz RF bandwidth	1423.7682.02
R&S®SMBVB-K524	Baseband Extension to 500 MHz RF bandwidth	1423.7699.02
R&S®SMBVB-K62	Baseband enhancements Additive White Gaussian Noise (AWGN)	1423.7876.02
R&S®SMBVB-K540	Envelope Tracking	1423.7701.02
R&S®SMBVB-K541	AM/AM, AM/fM Predistortion	1423.7718.02
R&S®SMBVB-K544	User-Defined Frequency Response Correction	1423.8150.02
R&S®SMBVB-K40	Digital standards GSM/EDGE	1423.7724.02
R&S®SMBVB-K41	EDGE Evolution	1423.7730.02
R&S®SMBVB-K42	3GPP FDD	1423.7747.02
R&S®SMBVB-K46	CDMA2000®	1423.7760.02
R&S®SMBVB-K47	1xEV-DO	1423.7776.02
R&S®SMBVB-K50	TD-SCDMA	1423.7782.02
R&S®SMBVB-K51	TD-SCDMA Enhanced BS/MS Tests	1423.7799.02
R&S®SMBVB-K54	IEEE 802.11 (a/b/g/n/j/p)	1423.7824.02
R&S®SMBVB-K55	EUTRA/LTE	1423.7830.02
R&S®SMBVB-K60	Bluetooth® EDR	1423.7853.02
R&S®SMBVB-K61	Multicarrier CW Signal Generation	1423.7860.02
R&S®SMBVB-K83	3GPP FDD HSPA/HSPA+, Enhanced BS/MS Tests	1423.7899.02
R&S®SMBVB-K84	EUTRA/LTE Release 9 and Enhanced Features	1423.7901.02
R&S®SMBVB-K85	EUTRA/LTE Release 10 (LTE-Advanced)	1423.7918.02
R&S®SMBVB-K86	IEEE 802.11ac	1423.7924.02
R&S®SMBVB-K87	1xEV-DO Rev. B	1423.7930.02
R&S®SMBVB-K112	LTE Release 11 and Enhanced Features	1423.8037.02
R&S®SMBVB-K113	LTE Release 12	1423.8043.02
R&S®SMBVB-K114	OFDM Signal Generation	1423.8050.02
R&S®SMBVB-K115	Cellular IoT	1423.8066.02
R&S®SMBVB-K117	Bluetooth® 5.0	1423.8089.02
R&S®SMBVB-K118	Verizon 5GTF Signals	1423.8095.02
R&S®SMBVB-K119	LTE Releases 13 and 14	1423.8108.02

R&S®SMBVB-K142	IEEE 802.11ax	1423.7901.02
R&S®SMBVB-K144	5G NR	1423.8608.02
R&S®SMBVB-K151	ILS	1423.8120.02
R&S®SMBVB-K152	VOR	1423.8137.02
R&S®SMBVB-K153	DME	1423.8143.02
R&S®SMBVB-K300	Pulse Sequencing	1423.8414.02
R&S®SMBVB-K301	Enhanced Pulse Sequencing	1423.8420.02
R&S®SMBVB-K350	DFS Signal Generation	1423.8443.02
R&S®SMBVB-B80	Other options Removable Mass Storage	1423.7160.02
R&S®SMBVB-B81	Rear Panel Connector for RF Path	1423.7360.02

## About Rohde & Schwarz

Rohde & Schwarz is an independent group of companies specializing in electronics. It is a leading supplier of solutions in the fields of test and measurement, broadcasting, radiomonitoring and radiolocation, as well as secure communications. Established more than 75 years ago, Rohde & Schwarz has a global presence and a dedicated service network in over 70 countries. Company headquarters are in Munich, Germany.

## Environmental commitment

- Energy-efficient products
- Continuous improvement in environmental sustainability
- ISO 14001-certified environmental management system

Certified Quality System  
ISO 9001
