

For W-CDMA/3GPP Transmission Test

Spectrum Analyzer R3267/3273

■ Overview

Installation of the W-CDMA/3GPP analysis software option (OPT.62) in the R3267/3273 enables modulation signal analysis and specification items measurement of W-CDMA-BTS/MS, 3GPP-BS/UE signals. I/Q baseband input as well as RF input can be selected, so consistent modulation analysis can be performed on the module and system level. (Operation of OPT.62 require Digital Modulation Analysis Option (OPT.01).)
