

R&S®OSP

Software Options

Installation Manual

Installation prerequisites

- Device type is R&S®OSP220, R&S®OSP230 or R&S®OSP320
- R&S®OSP firmware version is **2.00** or later
- For each software option that you want to install, you have received a valid license key in **print** or in an electronic format, typically as a **.pdf**, **.xml** or **.rsi** file

Installation procedure for R&S®OSP software option licenses

1) Start the R&S®OSP.

2) If you install a *temporary* software option:

Check in the "Configuration" > "General" menu, if the "System Date" is set correctly.

Any later change of the system date can deactivate installed temporary software options.

3) Go to the "Configuration" > "General" > "Context" menu.

4) Select the function "Enter Option Key".

A dialog opens for entering the license key (see next page).

5) Enter the 30-digit license key for the software option that you want to install.

You can copy the key out of the **.xml** or **.rsi** file ([Ctrl]+[c]) and paste it into the dialog ([Ctrl]+[v]).

6) Click "OK" to activate the licensed option for your R&S®OSP.

A dialog shows the installed license key and confirms that it is active (unless it is invalid).

7) Click "Close" to close the dialog.

- **Note:** Triple usage of invalid license keys disables key entry for a brief period of time.
