# PiMPro Software Version 4.05.00
RELEASE NOTES

This software and firmware release intended for PiMPro Tower Series. We encourage you to provide your feedback to support@cciproducts.com.

Several improvements have been made in order to protect and preserve the amplifiers inside the unit.

FIXES and IMPROVEMENTS since previous version:

1) **VSWR Alarm & TX Shutdown** – If reflected power is more than 10 watts, this will cause an automatic VSWR Alarm and TX Shutdown. Additionally, the following pop-up window will be displayed to notify the user of the high reflection.

2) **TX Output Limit** – Unit will automatically limit the TX Output Power to a maximum of +43 dBm (20 Watts) when the PiMPro temperature reaches +50°C.

Installation Steps for PiMPro S/W Version 4.05.00

1) Load this version of PiMPro Software (PIMProD_4_05_00.tar.gz) onto a USB drive

2) Install via the **S/W Updates** icon within the **Config Menu**.

3) Note that the previous version of Software will be saved on your analyzer. You can chose to restore to the previous version at any time.
