Definitions

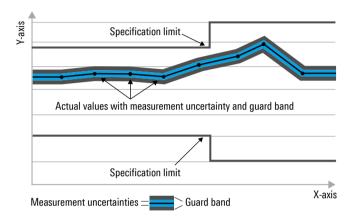

General

Product data applies under the following conditions:

- · Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as <, \leq , >, \geq , \pm , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bit per second (Gbps), million bit per second (Mbps), thousand bit per second (kpps), million symbols per second (Msps) or thousand symbols per second (kpps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Msps, ksps, ksps and Msample/s are not SI units.

Introduction

R&S®WinIQSIM2 has been especially developed for easily generating digitally modulated signals. The graphical user interface allows intuitive operation, supported by context-sensitive help. By offering a convenient way to create any standard-compliant waveform with all the included standards and to generate multicarrier signals as well as multisegment waveforms, R&S®WinIQSIM2 is suitable for a wide range of applications.

The signals generated with the aid of the R&S®WinIQSIM2 software can be output by the R&S®SMW200A (R&S®SMW-B9/-B10 options), R&S®SMBV100B, R&S®SMM100A (R&S®SMM-B9 option), R&S®SMCV100B, R&S®SGT100A (R&S®SGT-K510 option) vector signal generators and by the R&S®PVT360A performance vector tester. Some standards also work for the R&S®CMW500/R&S®CMW100/R&S®CMW290/R&S®CMP200/R&S®CMP180 radio communication testers, the R&S®CMW270 wireless connectivity tester and the R&S®CMA180 radio test set. R&S®WinIQSIM2 can be downloaded from www.rohde-schwarz.com – search term: WinIQSIM2.

This document describes the capabilities of the R&S®WinIQSIM2 software. Please note that additional hardware limitations of the used Rohde & Schwarz signal generator (especially maximum signal bandwidth, ARB memory size and maximum sample clock rate) apply. For instrument-specific data, see the data sheet of the respective Rohde & Schwarz instrument.

Key features

Large variety of digital standards

- Cellular standards
 - 5G New Radio, incl. Rel. 15, Rel. 16 and Rel. 17
 - LTE, incl. Rel. 8, Rel. 9, Rel. 10, Rel. 11, Rel. 12, Rel. 13, Rel. 14 and Rel. 15
 - Cellular IoT (eMTC and NB-IoT), incl. Rel. 13, Rel. 14 and Rel. 15
 - OneWeb reference signals and OneWeb user-defined signal generation
 - 3GPP FDD with HSDPA, HSUPA and HSPA+ (HSPA Evolution)
 - CDMA2000® with 1xEV-DV
 - 1xEV-DO Rev. A, Rev. B
 - TD-SCDMA
 - GSM/EDGE
 - EDGE Evolution, VAMOS
 - Verizon 5GTF signals
 - TETRA Release 2
- · Wireless connectivity standards
 - WLAN IEEE 802.11a/b/g/n/j/p/ac/ax/be/ad/ay
 - IEEE 802.16 WiMAX™ supporting OFDM and OFDMA
 - HRP UWB
 - UWB (ECMA-368)
 - Bluetooth®, up to Release 5.1
 - NFC A/B/F including EMV Type A/B
 - LoRa®
- · Broadcast standards
 - DVB-T/DVB-H
 - DAB/T-DMB
 - DVB-S2/DVB-S2X/DVB-S2X Annex E
 - DVB-RCS2
- Navigation standards
 - GPS, GLONASS, Galileo, BeiDou (Compass), NavIC (IRNSS)
- · Other standards
 - OFDM signal generation
 - AWGN

Additional systems in R&S®WinIQSIM2

- Custom digital waveforms allow the generation of user-definable digital signals while offering user-selectable modulation parameters
- Multicarrier CW signal generation
- Multicarrier generation allows several digital signals to be combined to form one waveform with different frequency offsets
- Multisegment waveform function makes it possible to have multiple different waveforms in an arbitrary waveform generator's memory and ensures minimum transition times, while even seamless transitions are possible
- AWGN generation and addition to the signal
- Import function to import I/Q samples via a server connection into the R&S[®]WinIQSIM2 signal generation chain where filtering can be performed and AWGN can be added

Extended graphics

- I and Q versus time
- Absolute value and phase versus time
- Vector diagram
- · Constellation diagram
- · FFT magnitude showing the spectrum of the signal
- · Eye diagram of I and Q
- Complementary cumulative distribution function (CCDF)

Convenient connections

- Waveform transmission via GPIB, USB and LAN
- · Waveforms can be locally stored on the PC; a USB memory stick can be used for data transmission
- · Control of instruments via remote desktop connection via LAN

Overview of digital standards on the different instruments

The following table gives an overview of the standards that are available for the different instruments, as well as of the respective option types. For better readability, option types are abbreviated as follows:

The R&S®SMW-K255 option is referred to as "SMW-K255", and so on.

Vector signal generators

Performance vector testers

A subset of R&S®WinIQSIM2 options is supported for the R&S®PVT360A.

| R&S®PVT-KW300 | GSM (same feature set as xxx-K240 and -K241) |
|---------------|---|
| R&S®PVT-KW301 | WCDMA (same feature set as xxx-K242 and -K283) |
| R&S®PVT-KW310 | LTE (LTE R8-R15 together with eMTC/Cat M1 feature set of xxx-K415, -K443 and -K446) |
| R&S®PVT-KW313 | NB-IoT (NB-IoT feature set of xxx-K415, -K443 and -K446) |
| R&S®PVT-KW320 | 5G NR Release 15/16 (same feature set as xxx-K444 and -K448) |
| R&S®PVT-KW326 | 5G NR Release 17 (same feature set as xxx-K471) |
| R&S®PVT-KW400 | Bluetooth® (same feature set as xxx-K260 and -K417) |
| R&S®PVT-KW410 | WLAN IEEE 802.11a/b/g/n/j/ac (same feature set as xxx-K254 and -K286) |
| R&S®PVT-KW411 | WLAN IEEE 802.11ax (same feature set as xxx-K442) |
| R&S®PVT-KW412 | WLAN IEEE 802.11be (same feature set as xxx-K447) |

Radio communication testers

A subset of R&S®WinIQSIM2 options is supported for the R&S®CMP200.

R&S®CMP-KW300 HRP UWB (NB-IoT feature set as xxx-K449)
R&S®CMP-KW601 5G NR (same feature set as xxx-K444 and -K448)

A subset of R&S®WinIQSIM2 options is supported for the R&S®CMP180.

| R&S®CMP-KW220 | GNSS (same feature set as xxx-K244, -K266, -K294, -K297, -K298, -K407 and -K432) |
|---------------|---|
| R&S®CMP-KW250 | NB-IoT (NB-IoT feature set of xxx-K415, -K443 and -K446) |
| R&S®CMP-KW280 | LP-IoT (same feature set as xxx-K431) |
| R&S®CMP-KW310 | Bluetooth® (same feature set as xxx-K260 and -K417) |
| R&S®CMP-KW350 | WLAN IEEE 802.11a/b/g/n/j/ac (same feature set as xxx-K254 and -K286) |
| R&S®CMP-KW351 | WLAN IEEE 802.11ax (same feature set as xxx-K442) |
| R&S®CMP-KW352 | WLAN IEEE 802.11be (same feature set as xxx-K447) |
| R&S®CMP-KW601 | 5G NR (same feature set as xxx-K444 and K448) |
| R&S®CMP-KW420 | GSM (same feature set as xxx-K240 and -K241) |
| R&S®CMP-KW440 | WCDMA (same feature set as xxx-K242 and -K283) |
| R&S®CMP-KW480 | CDMA2000® 1x RTT (same feature set as xxx-K246, -K247 and -K287) |
| R&S®CMP-KW500 | LTE (LTE R8-R15 together with eMTC/Cat M1 feature set of xxx-K415, -K443 and -K446) |
| R&S®CMP-KW570 | LTE C-V2X (V2X feature set of xxx-K419) |
| | |

A subset of R&S®WinIQSIM2 options is supported for the R&S®CMW500 and R&S®CMW100.

| R&S®CMW-KW010 | AWGN (same feature set as xxx-K262) |
|----------------|--|
| R&S®CMW-KW200 | GSM/EDGE (same feature set as xxx-K240) |
| R&S®CMW-KW201 | EDGE Evolution (same feature set as xxx-K241) |
| R&S®CMW-KW300 | LTE NB-IoT (NB-IoT feature set as xxx-K415) |
| R&S®CMW-KW400 | WCDMA (same feature set as xxx-K242) |
| R&S®CMW-KW401 | HSDPA (same feature set as xxx-K243) |
| R&S®CMW-KW402 | HSUPA (same feature set as xxx-K245) |
| R&S®CMW-KW403 | WCDMA Release 7 HSPA+ (same feature set as xxx-K259) |
| R&S®CMW-KW500 | LTE (same feature set as xxx-K255) |
| R&S®CMW-KW502 | LTE Release 10 (same feature set as xxx-K285) |
| R&S®CMW-KW504 | LTE Release 12 (same feature set as xxx-K413) |
| R&S®CMW-KW514 | LTE Release 13 LAA (LAA features set of xxx-K419) |
| R&S®CMW-KW570 | LTE Release 14 C-V2X (V2X feature set of xxx-K419) |
| R&S®CMW-KW590 | LTE MTC (eMTC feature set of xxx-K415) |
| R&S®CMW-KW6000 | 5G NR (same feature set as xxx-K444) |

R&S®CMW-KW610 Bluetooth® (same feature set as xxx-K260)

R&S®CMW-KW620 GPS (1 satellite, same feature set as xxx-K244 and xxx-K298)
R&S®CMW-KW621 GLONASS (1 satellite, same feature set as xxx-K294)
R&S®CMW-KW622 Galileo (1 satellite, same feature set as xxx-K266)
R&S®CMW-KW623 BeiDou (1 satellite, same feature set as xxx-K407)

R&S®CMW-KW630 DVB (same feature set as xxx-K252) R&S®CMW-KW632 DAB (same feature set as xxx-K253)

R&S®CMW-KW650 WLAN IEEE 802.11a/b/g/n/j/p (same feature set as xxx-K254)
R&S®CMW-KW656 WLAN IEEE 802.11ac (same feature set as xxx-K286)
R&S®CMW-KW657 WLAN IEEE 802.11ax (same feature set as xxx-K442)

R&S®CMW-KW683 LoRa® (same feature set as xxx-K431)
R&S®CMW-KW750 TD-SCDMA (same feature set as xxx-K250)

R&S®CMW-KW751 TD-SCDMA enhanced (same feature set as xxx-K251)

R&S®CMW-KW800 CDMA2000® (same feature set as xxx-K246)
R&S®CMW-KW880 1xEV-DO Rev. A (same feature set as xxx-K247)

A subset of R&S®WinIQSIM2 options is supported for the R&S®CMW290.

Digital modulation systems

The specified data applies together with the parameters of the relevant standard.

Note that the given parameter ranges may be additionally restricted due to inter-parameter dependencies.

Cellular standards

5G New Radio

The 5G NR software options implement the physical layer in line with 3GPP Releases 15, 16 and 17. With support for all downlink and uplink physical channels and signals, multiple bandwidth parts with mixed numerology, as well as important physical layer features such as channel coding, scrambling, multiplexing of data and control information, these options provide standard-compliant signals to test components, modules, receivers and base stations for FR1 and FR2.

| 3GPP 5G NR digital standard | Release 15/16/17 features in line with the |

| | following versions of the 3GPP |
| | specifications, or newer: |
| | • TS 38.211 v.17.3.0 |
| | • TS 38.212 v.17.3.0 |
| | • TS 38.213 v.17.3.0 |
| | • TS 38.214 v.17.3.0 |

5G New Radio Release 15 (xxx-K444, R&S®PVT-KW320, R&S®CMW-KW6000 or R&S®CMP-KW601 option)

Key features

General

- In line with 3GPP 5G NR Release 15
- All numerologies up to 240 kHz subcarrier spacing
- Normal and extended cyclic prefix
- Channel bandwidth up to 400 MHz
- . CP-OFDM in downlink and uplink and optionally DFT-S (transform precoding) in uplink
- BPSK, π/2-BPSK, QPSK, 16QAM, 64QAM, 256QAM Modulation
- · Carrier aggregation including cross-carrier scheduling
- Intuitive user interface with graphical display of time plan
- Several SS/PBCH simultaneously at multiple frequency positions
- · Multi numerology (mixed numerology)
- Channel coding
- DCI and UCI
- · Flexible BWP configuration
- Up to 10 users
- MIMO and multi-layer transmission
- Flexible mapping of the antenna ports to the output(s)
- Optional BWP-wise filtering
- · Various leveling modes for the different use cases
- Time domain windowing/WOLA
- RedCap support

Downlink

- Downlink signals and channels: PSS, SSS, PBCH, PDSCH, CORESET/PDCCH, DMRS, CSIRS, PTRS
- Automatic PDSCH scheduling from DCI
- · MIB content coding
- · Dynamic spectrum sharing (DSS) for 5G and LTE
- NR-TM presets of TS 38.141 for FR1 and FR2

Uplink

- Uplink signals and channels: PUSCH, PUCCH, PRACH, DMRS, PTRS, SRS
- Assistant for resource block configuration based on TS 38.521-1 Table 6.1-1
- Assistant for FRCs of TS 38.141 for FR1 and FR2
- PUSCH frequency hopping

Additional

Quick settings for simplified 5G NR signal generation

| NR-TM presets | | test models that use Release 15 features are in line with the following versions of the 3GPP specifications, or newer: TS 38.141-1 v.17.6.0 TS 38.141-2 v.17.6.0 |
|---|--|--|
| Note that the given parameter ranges management of the settings | ay be additionally restricted due to inter-parar | meter dependencies. |
| RF frequency | | user-selectable in entire frequency range of respective Rohde & Schwarz |
| Sequence length | | instrument can be entered in frames (10 ms each); the maximum length depends on the available ARB memory options and the configured 5G NR settings, e.g. the |
| Filter mode | | channel bandwidth channel BW, per BWP, off, fast, user |
| Suppress subcarrier on output carrier | | on/off |
| Sample rate variation Marker | | on/off • subframe • radio frame start • restart (ARB) • user period • on/off period • system frame number restart • TDD UL/DL |
| Link direction | | downlink, uplink |

| Content | per carrier and per subframe and per BWP and per allocation | CORESET, PDSCH, PUSCH, PRACH, PUCCH |
| Modulation | per carrier and per subframe and per BWP and per allocation | BPSK, π/2-BPSK, QPSK, 16QAM, 64QAM, 256QAM |
| DFT-S (transform precoding) | per carrier and per subframe and per BWP | on/off |
| PUCCH settings | | |
| Group and sequence hopping | | supported |
| Format | | F0 to F4 |
| PRACH settings | | 405111 5111 45111 50111 55111 |
| PRACH subcarrier spacing | | 1.25 kHz, 5 kHz, 15 kHz, 30 kHz, 60 kHz, 120 kHz |
| Format | | 0, 1, 2, 3, A1, A2, A3, B1, B2, B3, B4, C0, C2 |

5G New Radio Release 16 (xxx-K448 option)

Key features

General

- In line with 3GPP 5G NR Release 16
- Up to 200 users
- Integrated backhaul access: PUSCH slot aggregation, SSB period

Downlink

- · Downlink signals and channels: PRS
- · Additional RNTI according to release 16
- Additional DCI formats according to release 16 as well as release 16 extensions of release 15 DCI formats
- Shared spectrum access: interlaced resource blocks, SS/PBCH adjustments, cyclic timing extension, CG-UCI, PRACH
- · Additional allocation type: RIM-RS

Uplink

• Release 16 updated for FRCs of TS 38.141 for FR1 and FR2

| Note that the given parameter ranges | may be additionally restricted due to inter-param | eter dependencies. |
|--------------------------------------|---|------------------------------------|
| Node settings | | |
| Count full system frame number | only for R&S [®] SMW200A equipped with B9 option | on/off |
| PRS state | per carrier | on/off |
| Node settings | | |
| TA state | | on/off |
| Users/BWP settings | | |
| Number of users | | 1 to 50 |
| Supported RNTIs | | as of -K444, plus CI-RNTI, PS-RNTI |
| Scheduling settings | | |
| DCI formats | | as of -K444, plus 2_4, 2_6 |

5G New Radio Release 17 (xxx-K471 or R&S®PVT-KW326 option)

Key features

- Extension to 71 GHz
 - Deployment frequency range (FR2-2, up to 71 GHz).
 - Channel bandwidths introduced with FR2-2 (800 MHz, 1600 MHz and 2000 MHz)
 - Channel bandwidths introduced: 35 MHz and 45 MHz
 - New subcarrier spacings: 480 kHz and 960 kHz
 - FR2-2 adjustments for SS/PBCH and PRACH
- Support of 1024QAM modulation including coding
- Additional DCI formats according to release 17 as well as release 17 extensions of existing DCI formats
- · Transport block over multi slot

5G New Radio sidelink (xxx-K470 option)

Key features

- Support of PSSCH, PSCCH and S-SS/PSBCH
- Support of SSCH channel coding
- Support of sidelink control information (SCI)

Verizon 5GTF signals

Verizon 5GTF (xxx-K418 option)

Key features

General

- Supports different predefined configurations in line with V5G.211, V5G.212, and V5G.213
- Cell-specific and UE-specific antenna ports can be configured
- Timeplan of generated signal
- Multi-antenna scenario modes such as transmit diversity and spatial multiplexing
- Intuitive user interface with graphical display of time plan

Downlink

- Four predefined downlink configurations comprise xPDCCH, xPDSCH, xPBCH channels, including reference and synchronization signals
- AutoDCI mode
- CSI-RS settings
- Channels xPBCH, xPDCCH, xPDSCH can be generated including DMRS reference signals
- DCI formats A1, A2, B1, B2 can be configured in terms of CCEs/xREGs
- xPDSCHs/CSI-RS are automatically generated from xPDCCH via AutoDCI mode

- · Four predefined uplink configurations comprise xPUSCH and xPUCCH channels, including reference signals
- · User-specific uplink settings
- · Configuration TX modes of UEs
- · LDPC channel coding for xPUSCH
- Flexible configuration of xPUSCH channel including UL PCRS
- Flexible configuration of xPUCCH channel including UL PCRS
- Up to four uplink users can be configured

| Verizon 5GTF digital standard | | in line with V5G.211, V5G.212, and |

| Transport block size | xPUSCH, in line with V5G.212 | see table in V5G.212 |

LTE

The LTE options implement the physical layer in line with 3GPP Release 8 to 15. With support for all downlink, uplink and sidelink physical channels, all specified channel bandwidths and modulation schemes such as 1024QAM, as well as important physical layer features such as channel coding, scrambling, multiplexing of data and control information, these options provide standard-compliant signals to test components, modules, receivers and base stations.

LTE Release 8 (xxx-K255, R&S®CMW-KW500 or R&S®CMP-KW500 option)

Key features

General

- FDD and TDD
- Downlink (OFDMA) and uplink (SC-FDMA)
- 1.4/3/5/10/20 MHz channel bandwidth
- QPSK, 16QAM, 64QAM modulation
- Full MIMO and transmit diversity support
- Multiple users
- Intuitive user interface with graphical display of time plan

Downlink

- P-SYNC, S-SYNC and DL reference signal derived from cell ID
- PBCH, PDSCH, PDCCH, PCFICH, PHIC
- PDCCH with full DCI configuration
- Channel coding and scrambling for PDSCH and PBCH (including MIB)
- Automatic PDSCH scheduling from DCI
- Downlink test models (E-TMs) in line with 3GPP TS 36.141

- · PRACH, PUCCH and PUSCH with channel coding and scrambling
- · DMRS and SRS
- Fixed reference channels (FRC) in line with 3GPP TS 36.141

| EUTRA/LTE digital standard | | in line with 3GPP Release 8: |
|------------------------------|---|---|
| | | • TS 36.211 v.15.6.0 |
| | | • TS 36.212 v.15.6.0 |
| | | • TS 36.213 v.15.6.0 |
| General settings | | |
| Mode | restricts the user interface to certain | only available if LTE as well as cellular IoT |
| | LTE/cellular IoT features for simplicity or | option(s) are installed in the instrument |
| | enables access to all features in line with | |
| | the installed options | |
| Duplexing | | FDD, TDD |
| Link direction | | downlink, uplink |
| EUTRA test models (downlink) | in line with 3GPP TS 36.141 v.8.12.0 | E-TM1.1, E-TM1.2, E-TM2, E-TM3.1, |
| | both FDD and TDD E-TMs are supported | E-TM3.2, E-TM3.3 |
| Physical settings | | |
| Channel bandwidth | determines the channel bandwidth used | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, |
| | | 20 MHz, user-defined |

| Cell-specific settings | | |
|---|--|---|
| Physical cell ID group | determines cell ID together with physical | 0 to 167 |
| <u> </u> | layer ID | |
| Physical layer ID | determines cell ID together with physical cell ID group | 0 to 2 |
| TDD special subframe configuration | only selectable if duplexing mode is set to TDD | 0 to 8 |
| TDD uplink/downlink configuration | only selectable if duplexing mode is set to TDD | 0 to 6 |
| Cyclic prefix | determines whether a normal or extended cyclic prefix is used for the subframes; Note: It automatically determines the number of symbols per subframe. | normal, extended, user-defined |
| MIMO Global MIMO configuration | simulated cell specific antenna configuration | 1, 2, 4 transmit antennas, SISO + BF |
| Resource allocation downlink | | |
| Number of configurable subframes | determines the number of configurable subframes; the subframe configurations are used periodically; Note: P/S-SYNC and PBCH are configured globally and therefore not copied here. The use of this function ensures a valid frame configuration. | up to 40 subframes; The actual range depends on the duplex mode, on the sequence length and – in the case of TDD – on the UL/DL configuration. |
| Behavior in unscheduled resource blocks | determines whether unscheduled resource blocks and subframes are filled with dummy data or left DTX | dummy data, DTX |
| Allocation table | | |
| Code word | up to 2 code words can be configured for MIMO | 1/1, 1/2, 2/2 |
| Modulation | determines modulation scheme used | QPSK, 16QAM, 64QAM |
| Content type | determines type of selected allocation | PDSCH, PDCCH, PBCH |
| Precoding scheme | sets multi-antenna mode for selected allocation | none, transmit diversity, spatial multiplexing, TX mode 7 |
| Configuration of PCFICH, PHICH, PDCCF | | |
| DCI format | can be individually mapped to CCEs | 0, 1, 1a, 1b, 1c, 1d, 2, 2a, 3, 3a |
| Configure user Transmission mode | selects the downlink transmission mode | user, mode 1 to mode 7 |
| Resource allocation uplink | Selects the downlink transmission mode | user, mode i to mode i |
| Select user equipment | up to 8 UEs can be configured individually a | and allocated to the subframes |
| Number of configurable subframes (for FDD), number of configurable uplink subframes (for TDD) | determines the number of configurable uplink subframes | up to 40 subframes |
| Allocation table | | |
| Content type | UE can be set to PUSCH or PUCCH | PUSCH, PUCCH |
| Modulation | determines the modulation scheme used if content type is PUSCH or the PUCCH format if content type is PUCCH | QPSK, 16QAM, 64QAM or format 1, 1a, 1b, 2, 2a, 2b |
| User equipment configuration | | |
| Mode | | standard, PRACH |
| FRC | selects the FRC | A1-1, A1-2, A1-3, A1-4, A1-5, A1-6, A1-7, A2-1, A2-2, A2-3, A3-1, A3-2, A3-3, A3-4, A3-5, A3-6, A3-7, A4-1, A4-2, A4-3, A4-4, A4-5, A4-6, A4-7, A4-8, A5-1, A5-2, A5-3, A5-4, A5-5, A5-6, A5-7, A7-1, A7-2, A7-3, A7-4, A7-5, A7-6, A8-1, A8-2, A8-3, A8-4, A8-5, A8-6, A12-1, A12-2, A12-3, A12-4, A12-5, A13-1, A13-2, A13-3, A13-4, A13-5, A13-1 |
| Channel coding mode | selects whether data, control information or both is transmitted on the PUSCH | |
| SRS state | enables sending of sounding reference signals | on/off |
| | | |

| Enhanced settings for PUSCH | | |
|-----------------------------|---------------------------------------|--------|
| Frequency hopping | | on/off |
| Settings for PRACH | | |
| Preamble format | set indirectly by PRACH configuration | 0 to 4 |

LTE Release 9 (xxx-K284 option)

For each K284 option, a K255 option must also be installed.

Key features

Downlink

- Downlink positioning reference signals (PRS)
- Dual-layer beamforming (transmission mode 8)
- MBMS single frequency network (MBSFN) including MCCH and PMCH channels

| General description | This option enhances the K255 option (LTE Release 8) to support LTE Release 9. | |
|---|--|---|
| EUTRA/LTE digital standard | | in line with 3GPP Release 9: |
| | | • TS 36.211 v.15.6.0 |
| | | • TS 36.212 v.15.6.0 |
| | | • TS 36.213 v.15.6.0 |
| Positioning reference signals (PRS) | | |
| PRS state | | on/off |
| Dual-layer beamforming | | |
| This option enables the generation of down | nlink signals dedicated to UE that is set to tran | smission mode 8. In order to support |
| this mode, the DCI format 2B is introduced | . The way that the (logical) antenna ports are | mapped to the (physical) TX antennas of |
| the signal generator is configurable. This fe | eature allows UE receiver testing in line with the | ne beamforming model defined in |
| TS 36.101, B.4. | | |
| Transmission mode | selects the downlink transmission mode | transmission mode range is extended by |
| | | transmission mode 8 |
| DCI format | selects the DCI format | DCI format range is extended by format |
| | | 2B |
| MBMS single frequency network (MBSF | N) | |
| This option enables the generation of MBS | FN subframes. All different allocation, modific | ation and repetition periods can be set |
| individually within the maximum number of | frames that can be generated in line with the | sequence length enabled by the K55 |
| option. References to the official 3GPP TS | 36.331 v.9.5.0 specification are abbreviated a | as TS 36.331. |
| MBSFN mode | mixed: 15 kHz subcarrier spacing | off, mixed, dedicated |
| | dedicated: 7.5 kHz subcarrier spacing ¹ | |

LTE Release 10 (LTE-Advanced) (xxx-K285 or R&S®CMW-KW502 option)

For each xxx-K285 (R&S®CMW-KW502) option, an xxx-K255 (R&S®CMW-KW500) option must also be installed.

Key features

Downlink

- Downlink carrier aggregation including cross-carrier scheduling
- Downlink transmission mode 9 for up to 8-layear beamforming
- CSI-RS
- Generation of DCIs with carrier indicator field (CIF)

- Enhanced SC-FDMA
- PUCCH format 3
- Simultaneous PUSCH and PUCCH transmission
- Noncontiguous PUSCH transmission (uplink resource allocation type 1)
- PUSCH transmission mode 2 (uplink MIMO)
- Aperiodic SRS (SRS trigger type 1)

¹ The dedicated mode will be supported in a later version.

LTE Release 11 (xxx-K412 option)

For each xxx-K412 option, an xxx-K255 option must also be installed.

Key features

Downlink

- TDD special subframe configurations 9 (normal cyclic prefix) and 7 (extended cyclic prefix)
- Mixed TDD settings for downlink carrier aggregation
- Enhanced PDCCH (EPDCCH)
- Transmission mode 10, DCI format 2D, scrambling settings for CoMP/eICIC/feICIC
- Automatic scheduling of downlink transmissions in line with long HARQ patterns ("Auto Sequence")

- Uplink carrier aggregation including mixed TDD settings
- PUCCH format 3 for periodic CSI

| General description | This option enhances the K255 option (LTE | Release 8) to support LTE Release 11. |

LTE Release 12 (xxx-K413 or R&S®CMW-KW504 option)

For each xxx-K413 (R&S®CMW-KW504) option, an xxx-K255 (R&S®CMW-KW500) option must also be installed on the respective instrument.

Key features

General

· Mixed duplexing for uplink and downlink carrier aggregation

Downlink

- 256QAM modulation for PDSCH, downlink dummy resource elements and PMCH
- Downlink test models for 256QAM in line with 3GPP TS 36.141 v.12.9.0
- DCI format 1C for eIMTA RNTI
- Further DL MIMO enhancements (enhanced 4TX codebook)
- UE category 0 assisted configuration for M2M

Sidelink

- Sidelink (D2D) communication, discovery and synchronization
- Sidelink transmission modes 1 and 2
- P-SLSS, S-SLSS, PSCCH, PSSCH, PSDCH, PSBCH
- · Scrambling and channel coding for PSSCH, PSDCH
- QPSK, 16QAM modulation for PSSCH/PSDCH with MCS index (0 to 28)

| EUTRA/LTE digital standard in line with 3GPP Release 12: TS 36.211 v.15.6.0 TS 36.212 v.15.6.0 TS 36.212 v.15.6.0 TS 36.213 v.15.6.0 256QAM modulation for PDSCH, downlink dummy resource elements and PMCH This option enables the generation of downlink signals with 256QAM modulation in the PDSCH channel, the PMCH channel, as in the dummy OFDM resource elements. Downlink test models for 256QAM in line with 3GPP TS 36.141 v.12.9.0 This option enables the configuration and generation of the 256QAM test models in line with 3GPP TS 36.141 v.12.9.0 for FDI well as TDD. Parameter EUTRA test models (downlink) in line with 3GPP TS 36.141 v.12.9.0 both FDD and TDD E-TMs are supported DCI format 1C for eIMTA-RNTI This option enables the generation of downlink DCI format 1C in case of eIMTA-RNTI. Mixed duplexing for uplink and downlink carrier aggregation This option enables the usage of different duplexing modes (FDD, TDD) in individual component carriers for uplink and downlicarrier aggregation, in line with EUTRA Release 12. Further DL MIMO enhancements (enhanced 4TX codebook) This option enables the usage of the enhanced 4TX codebook, in line with EUTRA Release 12. Sidelink |

LTE Releases 13/14/15 (xxx-K419, R&S®CMW-KW514, CMW-KW570 or R&S®CMP-KW570 option)

For each xxx-K419 (R&S®CMW-KW514/-KW570) option, an xxx-K255 (R&S®CMW-KW500) option must also be installed on the respective instrument. The R&S®CMW-KW514 option covers the LAA related feature set only. The R&S®CMW-KW570 and the R&S®CMP-KW570 options cover the C-V2X related feature set only.

Key features

Downlink

- 1024QAM modulation for PDSCH
- Downlink licensed-assisted access (LAA) (xxx-K285 is also required)
- Frame structure type 3, DRS for LAA, DCI 1C for LAA
- Enhancements for DCI formats 2C/2D (dmrsAltTable/semiOpenLoop)
- CSI-RS enhancements for full dimension MIMO

Uplink

- 256QAM modulation for PUSCH
- PUCCH formats 4 and 5
- Special subframe configuration 10 (PUSCH in special subframe including DMRS)
- · SRS enhancements for full dimension MIMO
- Enhanced uplink DMRS (ul-DMRS-IFDMA)
- · PRACH restricted set type B
- FRCs in line with Releases 13, 14 and 15

Sidelink

- Cellular V2X communication and synchronization
- Sidelink transmission modes 3 and 4
- Cellular V2X RMCs in line with 3GPP TS 36.521
- SCI and DCI enhancements for cellular V2X

Additional

· Graphical display of time plan for V2X UEs

| General description | This option enhances the K255 option (LTE and 15. | Release 8) to support LTE Releases 13, 14 |

Cellular IoT

Cellular IoT Release 13 (xxx-K415, R&S®CMW-KW300, R&S®CMW-KW590 or R&S®CMP-KW250 option)

The R&S®CMW-KW300 and the R&S®CMP-KW250 options cover the NB-IoT related feature set only. The R&S®CMW-KW590 option covers the MTC related feature set only. For R&S®CMW-KW590 option, an R&S®CMW-KW500 option must also be installed on the respective instrument.

Key features

General

- NB-IoT and eMTC
- UE categories M1 and NB1
- FDD and TDD for eMTC, FDD for NB-IoT
- Downlink and uplink
- Standalone and mixed configuration with LTE (R&S®SMx-K55 required)
- NB-IoT modes inband, guard band and standalone
- eMTC mode inband
- Coverage enhancement CE modes A and B
- Intuitive user interface with graphical display of time plan

Downlink

- · NPSS, NSSS and downlink reference signal derived from cell ID
- PBCH, PDSCH, MPBCH
- NPDCCH and NPDSCH with full DCI configuration
- Channel coding and scrambling for NPDCCH, NPDSCH and NPBCH (including SIB type 1)
- Downlink test models (N-TMs) in line with 3GPP TS 36.141
- Support for one NB-IoT anchor carrier and up to three dummy carriers
- Support for eMTC narrowband hopping and search spaces

- NPUSCH with channel coding and scrambling
- NPRACH configuration
- SRS
- NB-IoT fixed reference channels (FRCs) in line with 3GPP TS 36.141

Cellular IoT Release 14 (xxx-K443 option)

For each xxx-K443 option, an xxx-K415 option must also be installed.

Key features

General

- UE categories M2 and NB2
- New TBS sizes for NB-IoT Cat-NB2
- Wider bandwidth in CE mode

Downlink

- New scrambling for NPDSCH-SIB1
- NPRS positioning reference signals
- Two HARQ processes for NB-IoT

- Frequency retuning
- PRACH restricted type B

| General description | · | This option enhances the LTE cellular IoT variants NB-IoT (narrowband IoT) and eMTC (enhanced machine type communication) in line with Release 14, i.e. Cat-NB2 and Cat-M2 | |

3GPP WCDMA/HSPA+

3GPP FDD (xxx-K242, R&S®CMW-KW400 or R&S®CMP-KW440 option)

Key features

- Four individually configurable BS/UE
- Real-time generation of P-CCPCH and up to three DPCHs in downlink
- One UE in real time in uplink, up to 128 additional mobile stations via ARB
- Support for compressed mode in downlink and uplink
- Physical layer-only HSDPA channels for usage in test models or OCNS
- Various graphical displays such as code domain, frequency spectrum, CCDF, and more, support fast and easy signal configuration/evaluation

| WCDMA 3GPP FDD digital standard | | Release 99 features in line with the 3GPP 25 series FDD specifications Release 11; physical layer-only HSDPA channels in line with the 3GPP 25 series FDD specifications Release 11 |
|---------------------------------------|---|--|
| Signal generation modes | | , - , |
| Signal generation modes | In downlink mode, the P-CCPCH (BCCH with running SFN), several DPCHs and all other channels (frame-cycle control channels such as SCH, OCNS simulation, other base stations, etc.) can be generated. In uplink mode, up to four user-configured mobile stations (PRACH, PCPCH or DPCCH and up to six DPDCHs) together with up to 128 of identical configuration can be simulated. | |
| ARB sequence length | The sequence length can be entered in fra | |

3GPP FDD enhanced MS/BS test including HSDPA, HSUPA and HSPA+ (xxx-K283 or R&S®CMW-KW401/-KW402/-KW403 options)

One xxx-K242 (R&S $^{\circ}$ CMW-KW400) option must be installed. R&S $^{\circ}$ CMW-KW401 supports HSDPA, R&S $^{\circ}$ CMW-KW402 supports HSUPA and R&S $^{\circ}$ CMW-KW403 supports HSPA+.

Key features

- Support of 3GPP HSDPA, HSUPA and HSPA+
- HSDPA H-Sets 1 to 12 with channel coding; user-definable H-Set configuration
- HSUPA fixed reference channels with channel coding and HARQ simulation
- Support of UL-DTX, DC-HSDPA, 4C-HSDPA and 8C-HSDPA

| WCDMA 3GPP FDD digital standard | HSDPA, HSUPA and HSPA+ features in lir specifications Release 11 | HSDPA, HSUPA and HSPA+ features in line with the 3GPP 25 series FDD specifications Release 11 | |
|---|---|---|--|
| Downlink simulation | • | | |
| HSDPA downlink channels (HS-SCCH, modulation (HOM, 64QAM) | HS-PDSCH and F-DPCH /enhanced F-DPCH) i | ncluding MIMO and downlink higher order | |
| Enhancements | The K242 option supports simulation of HSDPA/HSPA+ channels in a continuous mode needed for TX measurements in line with TS 25.141 (test models 5 and 6). The K283 option supports simulation of HS-SCCH (high speed shared control channel) an HS-PDSCH (high speed physical downlink shared channel) in line with TS 25.211. Th implies the correct timing between these channels as well as the capability to set start subframe and inter-TTI distance. For HS-PDSCH, modulation schemes up to 64QAM are supported as well as MIMO (double transmit antenna array, D-TXAA). In addition, several F-DPCHs (fractional dedicated physical channel) up to slot format 9 (enhance F-DPCH) can be generated. | | |
| Ranges | modulation | QPSK, 16QAM or 64QAM; In case of MIMO, the modulation for the two streams can be set independently. | |
| Ranges (valid for F-DPCH) | slot format | 0 to 9 | |
| Fixed reference channel definition H-Se | <u> </u> | | |
| Enhancements | The K283 option allows HSDPA downlink channels with channel coding to be generated in line with the definition of the fixed reference channels (H-Sets 1 to 12) in TS 25.101; in addition, a user-editable H-Set configuration is possible, as well as user-configurable bit/block error insertion for H-Sets 1 to 5. The cases for HS-SCCH-less operation (downlink continuous packet connectivity, CPC), MIMO and downlink higher order modulation (HOM, 64QAM) are also included. | | |
| Ranges | H-Set | H-Set 1 to H-Set 12 user-editable H-Set | |
| | HS-PDSCH modulation | HS-SCCH type 1 to 3, in line with TS 25.212 QPSK, 16QAM or 64QAM; In case of MIMO, the modulation for the two streams can be configured. Note: Only the combinations of modulation modes in line with TS 25.212 table 14 are possible. | |
| HSUPA downlink channels (E-AGCH, E | -RGCH, E-HICH) | | |
| Enhancements | In downlink, the K283 option supports simulation of the HSUPA control channels E-AGCH (E-DCH absolute grant channel), E-RGCH (E-DCH relative grant channel) and E-HICH (E-DCH hybrid ARQ indicator channel) in line with TS 25.211. | | |
| Features for type 3i enhanced performa | | | |
| Enhancements | The K283 supports OCNS generation for type 3i enhanced performance requirements tests or generation of H-Sets with varying modulation and number of HS-PDSCH. | | |
| Dynamic power control (not available in | | | |
| Enhancements | The K283 option allows the variation of the output power in real-time mode for up to three DPCHs in three submodes: | | |
| | external (not available for the R&S®SMBVB-K283 option) by TPC pattern | The UE provides TPC info to the Rohde & Schwarz instrument by an external connector (TTL level). The TPC pattern is used to control the | |
| | manual | output power. The output power is changed incrementally by pressing buttons or sending the corresponding remote control commands. | |

| Uplink simulation | al control channel) including MIMO and up to | BC-HCDDA |
|--|--|--|
| Enhancements | al control channel) including MIMO and up to 8C-HSDPA The K242 option does not support HSDPA for the uplink. The K283 option allows the simulation of an HS-DPCCH (high speed dedicated physical control channel) in real-time operation (UE1 in "up to Release 7" or "Release 8 and later RT" compatibility mode) and arbitrary waveform mode (UE1 in "Release 8 and later" compatibility mode, UE2 to UE4, additional mobile stations). | |
| Ranges | compatibility mode | up to Release 7, Release 8 and later, Release 8 and later RT; Release 8 and later RT is not supported in all-offline mode |
| | MIMO mode secondary cell enabled/active | on/off 0 to 7 |
| E-DPCCH (E-DCH dedicated physical conforder modulation (HOM, 4PAM) | rol channel), E-DPDCH (E-DCH dedicated ph | |
| Enhancements | In uplink, the K283 option supports the simu E-DPDCHs in each of the mobile stations, a coding in line with the definition of the fixed TS 25.141 or with user-configured coding c | and for mobile station 1 also with channel reference channels in TS 25.104 and |
| E-DPDCH | overall symbol rate (total symbol rate of all uplink E-DPDCHs) | 15 ksps, 30 ksps, 60 ksps, 120 ksps 240 ksps, 480 ksps, 960 ksps 2 × 960 ksps, 2 × 1920 ksps 2 × 960 ksps + 2 × 1920 ksps |
| LICLIDA EDO | modulation | BPSK, 4PAM |
| HSUPA FRC | channel coding in line with the definition of fixed reference channels in TS 25.104 and TS 25.141 or with user-configured coding chain; in addition, a user-configurable virtual HARQ mode or a HARQ feedback mode (not in all-offline mode) and bit/block error insertion are possible | |
| | fixed reference channel (FRC) (channel coding schemes) | FRC 1 to FRC 8, user |
| | data source E-DCH | PRBS: 9, 11, 15, 16, 20, 21, 23, All0, All1, pattern (length: 1 bit to 64 bit), data lists |
| | HARQ feedback simulation (not available for the R&S®SMBVB-K283 option, not available in all-offline mode): feedback (TTL) connected to an input connector | |
| | maximum number of retransmissions | 0 to 20 |
| | ACK definition virtual HARQ mode | high, low |
| | HARQ ACK/NACK pattern (individual ACK/NACK pattern for each HARQ process) | up to 32 ACK/NACK commands used periodically |
| Uplink DPCCH with 4 TPC bits | | 1 |
| Enhancements | The K42 option allows the simulation of DPCCH with 2 TPC bits per slot only (slot formats 0 to 3). The K83 option now enables simulation of DPCCH with 4 TPC bits per slot (slot formats 0 to 4). | |
| Ranges in the uplink DPCCH settings | slot format | 0 to 4 |
| UL-DTX CPC feature and uplink user sche | TPC mode duling feature | 2 bit, 4 bit |
| Enhancements | The K283 option enables simulation of the UL-DTX CPC feature for mobile station 1. In addition, the K283 option enables flexible scheduling of uplink transmission for mobile station 1 by means of a user-generated user scheduling file (not available in all-offline mode and not available for the R&S®SMBVB-K283 option). | |
| Ranges in the UL-DTX /user scheduling configuration dialog | mode FROUTE | on/off UL-DTX, user scheduling; User scheduling is not available in all- offline mode or for R&S®SMBVB-K283. |
| Additional power reference modes | E-DCH TTI | 2 ms, 10 ms |
| Enhancements | Additional power reference modes in line w features. | ith the other new HDSPA/HSUPA/HSPA+ |
| Ranges | power reference | RMS power, first DPCCH, PRACH message part, last PRACH preamble, first HARQ-ACK, first PCI/CQI, first E-DCH |

TD-SCDMA

TD-SCDMA (3GPP TDD LCR) (xxx-K250 or R&S®CMW-KW750 option)

Key features

- · Downlink cells, slots, pilots and guard period
- Signal generation of P-CCPCH, S-CCPCH and DPCCH, HS-SCCH in downlink
- BCH and DCH transport channels
- PUSCH, PRACH support in uplink
- Data, mid-amble sequences
- Various graphical displays such as code domain, frequency spectrum, CCDF, and more, support fast and easy signal configuration/evaluation

| WCDMA 3GPP TDD LCR (TD-SCDMA) digital standard | | in line with 3GPP TDD standard for a chip rate of 1.28 Mcps (low chip rate mode) |
|--|---|--|
| Signal generation modes/sequence length | simulation of up to 4 TD-SCDMA cells with variable switching point of uplink and downlink; user-configurable channel table for each slot and simulation of the downlink | |
| | and uplink pilot timeslot; in uplink, a PRACH can also be generated. | |
| | sequence length can be entered in frames (| (10 ms each) |
| Modulation | QPSK, 8PSK | |
| Generate waveform file | filtering of data generated in ARB mode and saving it as waveform file | |
| General settings | | |
| Chip rate | standard | 1.28 Mcps (7 slots/subframe) |
| | range | 1 Mcps to 5 Mcps |
| Link direction | | uplink (reverse link) |
| | | downlink (forward link) |
| Baseband filter | standard | $\sqrt{\cos}$, $\alpha = 0.22$ |
| | other filters | $\sqrt{\cos}$, cos, user filters |
| Code channels | downlink/uplink: up to 16 data channels (plus special channels) per slot, 7 slots per subframe, simulation of up to 4 cells | |

| Configure cell | |
|-------------------------------|--|
| Predefined settings | generation of complex signal scenarios with parameterizable default settings |
| | selectable parameters: use of P-CCPCH, number and spreading factors of data |
| | channels, crest factor: minimal/average/worst |
| Physical channels in downlink | |
| | primary common control physical channel 1 (P-CCPCH 1) |
| | primary common control physical channel 2 (P-CCPCH 2) |
| | secondary common control physical channel 1 (S-CCPCH 1) |
| | secondary common control physical channel 2 (S-CCPCH 2) |
| | fast physical access channel (FPACH) |
| | physical downlink shared channel (PDSCH) |
| | dedicated physical channel modulation QPSK (DPCH QPSK) |
| | dedicated physical channel modulation 8PSK (DPCH 8PSK) |
| Physical channels in uplink | |
| | physical uplink shared channel (PUSCH) |
| | dedicated physical channel modulation QPSK (DPCH QPSK) |
| | dedicated physical channel modulation 8PSK (DPCH 8PSK) |
| | high speed shared information channel (HS-SICH) |
| | enhanced physical uplink shared channel QPSK (E-PUCH QPSK) |
| | enhanced physical uplink shared channel 16QAM (E-PUCH 16QAM) |

TD-SCDMA (3GPP TDD LCR) enhanced BS/MS test including HSDPA (xxx-K251 or R&S®CMW-KW751 option)

One xxx-K250 (R&S®CMW-KW750) option must be installed.

Key features

- HSDPA and HSUPA support
- Predefined and user defined reference measurement channels for uplink and downlink
- Various graphical displays such as code domain, frequency spectrum, CCDF, and more, support fast and easy signal configuration/evaluation:

| General parameters | This option enhances the K250 option (TD-SCDMA digital standard) to support full channel coding and HSDPA. | |
|---|--|----------------------------|
| Signal generation modes/sequence length | simulation of up to 4 TD-SCDMA cells with generation of the coded P-CCPCH (BCH with running SFN) and the reference measurement channels RMC 12.2 kbps up to RMC 2048 kbps; simulation of the HSDPA channels HS-SCCH, HS-PDSCH (QPSK, 16QAM and 64QAM modulation), HS-SICH, HSDPA and HSUPA | |
| | insertion of bit and block errors possible | |
| Modulation | QPSK, 8PSK, 16QAM and 64QAM | |
| HSDPA physical channels | high speed shared control channel 1 (HS-SCCH 1) | |
| , , | high speed shared control channel 2 (HS-S | , |
| | high speed physical downlink shared chan | nel QPSK (HS-PDSCH QPSK) |
| | high speed physical downlink shared chan | nel 16QAM (HS-PDSCH 16QAM) |
| | high speed physical downlink shared channel 64QAM (HS-PDSCH 64QAM) | |
| | high speed shared information channel (HS-SICH) | |
| Channel coding | coding of enhanced channels in line with the definition of reference measurement | |
| | channels in TS 25.102, TS 25.105 and TS 25.142 | |

Wireless connectivity standards

WLAN IEEE 802.11

The WLAN software options support standard compliant signal generation in line with IEEE 802.11a/b/g/n/j/p/ac/ax/be/ad/ay. Channel bandwidths of 20 MHz, 40 MHz, 80 MHz, 80+80 MHz, 160 MHz and 320 MHz are supported and even 4.32 GHz bandwidth with the R&S®SMW200A for IEEE 802.11ay. The options support high throughput (HT), very high throughput (VHT), high efficiency (HE) and extremely high throughput (EHT) modes including MIMO capabilities (generation of up to eight spatial streams and up to eight TX antennas).

IEEE 802.11a/b/g/n/j/p (xxx-K254, R&S®CMW-KW650 or R&S®CMP-KW350 option)

- Support of all standard compliant transmission modes
- Support of all three operating modes: legacy, mixed mode, green field
- Standard compliant MCS, 256QAM
- Up to four spatial streams/antennas

IEEE 802.11ac (xxx-K286, R&S®CMW-KW656 or R&S®CMP-KW350 option)

One xxx-K254 (R&S®CMW-KW650) option must be installed.

Key features

- Support of all 802.11ac VHT transmission modes
- Standard compliant MCS index 0 to 9, 1024QAM
- Up to eight spatial streams/antennas
- Multi-user MIMO, space time block coding (STBC), spatial multiplexing

| General parameters | This option enhances the K254 option (IEEE 802.11a/b/g/n/j/p) to support IEEE 802.11ac modes. | |
|--------------------------------|---|--|
| IEEE 802.11ac digital standard | | in line with IEEE 802.11ac-2013 |

| Burst types | | FCH, DL-MAP, UL-MAP, DCD, UCD, |
| | | SUB-DL-UL-MAP, HARQ, ranging, fast |
| | | feedback, data |

NFC

NFC is based on RFID technology and makes mobile phones suitable for numerous applications including, for example contactless payment of tickets, downloading of information from a passive RFID tag, use as security ID etc. Other than with RFID, some devices can also act as a reader (poller) and as a listener. There are three types of NFC, all working on the same frequency of 13.56 MHz, but with different data rates and modulation characteristics: NFC-A, NFC-B and NFC-F.

NFC A/B/F (xxx-K289 option)

This option supports all three NFC types and the different command types from the standard. In the sequence configurator, you can easily configure a complete message sequence to do a real test with an NFC device.

- Signal generation with standard-conform signals for NFC A/B/F
- Sequence generator with all signals from the standard
- · Predefined sequences for polling applications
- Flexible pulse form definition

| NFC A/B/F digital standard | If "Technology" is set to "NFC-A", "NFC-B" or "NFC-F", signals are generated in line |
|----------------------------|---|
| | with the NFC Forum™ specifications "NFCForum-TS-DigitalProtocol-1.0" and |
| | "NFCForum-TS-Analog-1.0". |
| | If "Technology" is set to "EMV type A" or "EMV type B", signals are generated in line |
| | with "Book D: Contactless Communication Protocol", version 2.2, from EMVCo, LLC. |

| General settings | |
|---------------------|---------------------------------------|
| Technology | NFC-A |
| | NFC-B |
| | NFC-F |
| | EMV Type A |
| | EMV Type B |
| Transmission mode | for technology "NFC-A", "NFC-B" or |
| | "NFC-F": poll, listen for technology; |
| | "EMV Type A" or "EMV Type B": |
| | "PCD to PICC", "PICC to PCD" |
| Modulation settings | |
| Bit rate | depending on technology and divisor: |
| | NFC-A and EMV type A: 105.938 kbit/s, |
| | NFC-B and EMV type B: 105.938 kbit/s, |
| | NFC-F with divisor 2: 211.875 kbit/s, |
| | NFC-F with divisor 4: 423.750 kbit/s |

Bluetooth®

The Bluetooth® software options support standard compliant Bluetooth® signal generation in line with specification Bluetooth® 5.1 plus previous releases on Rohde & Schwarz vector signal generators. The user interface allows to configure Bluetooth® signals for Basic Rate (BR), Enhanced Data Rate (EDR) and Low Energy with all the different channel types, packet types and packet formats including AoA/AoD. Packet content can be modified with user-specific data using the intuitive packet editor. Additional dirty transmitter configuration is possible for receiver sensitivity tests.

Bluetooth® EDR/Low Energy (xxx-K260, R&S®CMW-KW610 or R&S®CMP-KW310 option) Key features

- In line with Bluetooth® specification 4.2, including enhanced data rate (EDR) and Low Energy mode
- Support of all three transport modes, in particular ACL+EDR, SCO and eSCO+EDR
- Support of all packet types for basic rate (BR) and enhanced data rate (EDR) modes

| Basic rate + EDR | | |
|------------------------|-----------------------------|---|
| Bluetooth® version | | version 4.2 |
| Transport modes | | ACL + EDR, SCO, eSCO + EDR |
| Supported packet types | | ID, NULL, POLL, FHS, DM1, DM3, DM5, |
| | | DH1, DH3, DH5, AUX1, 2-DH1, 2-DH3, |
| | | 2-DH5, 3-DH1, 3-DH3, 3-DH5, HV1, HV2, |
| | | HV3, DV, EV3, EV4, EV5, 2-EV3, 2-EV5, |
| | | 3-EV3, 3-EV5; |
| | | in all data mode or with packet editor |
| Data sources | | All0, All1, PRBS 7 to PRBS 23, pattern, |
| | | data list |
| Data whitening | | supported |
| Packet editor features | access code | calculated from entered device address |
| | header bits | can be set individually, SEQN bit toggles |
| | | with each generated packet |
| | HEC | calculated automatically |
| | payload CRC | calculated automatically |
| Power ramping | ramp function | cos ² , linear |

Bluetooth® 5.x (xxx-K417)

One xxx-K260 option must be installed.

- Further improvements of several Low Energy characteristics for IoT applications
- Low Energy long range to quadruple the range
- Double the speed up to 2 Msymbol/s
- Low Energy advertising extensions to increase data broadcasting capacity by 800 %
- Direction finding with AoA/AoD

LoRa®

LoRa® (long range) is a digital wireless communications technology owned by Semtech that enables very-long-range transmission (> 10 km in rural areas) with low power consumption. This fits perfectly to internet of things (IoT) applications in rural areas. With this option it is possible to generate LoRa® physical layer signals with the signal generators from Rohde & Schwarz in line with the specification including impairments for symbol timing error, frequency offset and frequency drift.

LoRa® (xxx-K431, R&S®CMW-KW683 or R&S®CMP-KW280 option)

- Chirped spread spectrum (125/250/500 kHz)
- Individual idle time
- Supporting all specified coding rates and spreading factors
- Configurable payload data
- · Symbol timing error, frequency offset, frequency drift

| LoRaWAN™ | | |
|-----------------------------------|------------------|--|
| LoRaWAN™ version | | version 1.1 |
| General settings | | |
| Bandwidth | | 7.8125 kHz, 10.4167 kHz, 15.625 kHz, 20.8333 kHz, 31.25 kHz, 41.667 kHz, 62.5 kHz, 125 kHz, 250 kHz, 500 kHz |
| Modulation, coding, header and pa | yload parameters | |
| Coding rate | | 0, 1, 2, 3, 4 |
| Spreading factor | | 6 to 12 |
| Encoder state | | on/off |
| Interleaver state | | on/off |
| Payload data length | | 1 byte to 255 bytes |
| Payload data source | | PRBS 9 to PRBS 23, All0, All1, |
| | | pattern (length: 1 bit to 64 bit) and data list |
| Payload CRC | | on/off |
| Payload reduced coding mode | | on/off |
| Sync mode | | public, private |
| Unmodulated preamble length | | 6 to 8 |
| Impairments | | |
| State | | on/off |
| Symbol timing error | | -300 ppm to +300 ppm |
| Frequency offset | | -200 kHz to +200 kHz |
| Frequency drift | state | on/off |
| | type | linear, sine |
| | deviation | -200 kHz to +200 kHz |
| | rate | 160 Hz to 1600 Hz |

UWB

HRP-UWB (xxx-K449 or R&S®CMP-KW300 option)

- IEEE 802.15.4, IEEE 802.15.4z-BPRF and IEEE 802.15.4z-HPRF
- Channel bandwidth: 499.2 MHz, 1081.6 MHz, 1331.2 MHz, 1354.97 MHz
- Individual idle time
- Supporting all specified coding rates and data rates
- · Configurable payload data
- Scrambled timestamp sequence (STS) coding
- · Impairments: symbol timing error and frequency offset

| General description | This option contains the support for the IEEE 802.15.4, IEEE 802.15.4z BPRF and HPRF | |
|-------------------------------|--|--|
| General settings | | |
| Channel bandwidth | 499.2 MHz, 1 MHz, 1081.6 MHz, | |
| | 1331.2 MHz and 1354.97 MHz | |
| Idle interval | 0 to 1e6 us | |
| Frame configuration | | |
| Code index | 1 to 24 | |
| STS configuration | 0, 1, 2, 3 | |
| Sync length | 16, 64, 1024, 4096 | |
| SFD | 0 to 4 | |
| Payload data source | Allo, All1, PRBS 9 to PRBS 23, pattern, | |
| | data list | |
| Payload CRC (FCS) | on/off | |
| STS active segment length | 32, 64, 128, 256 | |
| STS number of active segments | 1 to 4 | |
| Impairments | | |
| State | on/off | |
| Symbol timing error | -300 ppm to +300 ppm | |
| Frequency offset | -200 kHz to +200 kHz | |

Broadcast and SatCom standards

DVB

DVB-T/DVB-H (xxx-K252 or R&S[®]CMW-KW630 option)

| DVB-T/DVB-H digital standard | | in line with ETSI EN 300 744 v1.5.1 | |
|------------------------------|--|--|--|
| General settings | | | |
| Hierarchy mode | | non-hierarchical | |
| Sequence length | The sequence length can be entered in superframes. With an oversampling of 2, a guard interval of 1/8 and TX mode 2, the user had 0.82 superframes/Msample. Example: If an R&S®SMU200A with 64 Msample memory is selected and the values are applied, R&S®WinIQSIM2 can generate 53 superframes. | | |
| Baseband filter | standard | cosine, $\alpha = 0.1$ | |
| Signal path parameters | | | |
| Input data | null packets are generated and filled with desired data transport stream | PN 15, PN 23, All0, All1 transport stream file (.GTS, .TS, .TRP) | |
| Scrambler | state | on/off | |
| Outer coder | Reed-Solomon | 204, 188, t = 8 | |
| | state | on/off | |
| Outer interleaver | Ciaio | convolutional, byte-wise (depth: 12) | |
| Cutor microare. | state | on/off | |
| Inner coder | | convolutional, punctured | |
| | state | on/off | |
| | code rates | 1/2, 2/3, 3/4, 5/6, 7/8 | |
| Inner interleaver | | bit interleaving, | |
| | | symbol interleaving | |
| | state | on/off | |
| | symbol interleaving block size | 1512 bit in 2K mode, | |
| | | 3024 bit in 4K mode, | |
| | | 6048 bit in 8K mode | |
| | symbol interleaving modes | native, in-depth | |
| Modulation | | QPSK, 16QAM, 64QAM | |
| Transmission modes | | 2k, 4k, 8k | |
| Guard interval | | 1/4, 1/8, 1/16, 1/32 | |
| Framing and signaling | | | |
| Superframe size | | 4 frames | |
| Frame size | | 68 OFDM symbols | |
| TPS settings | cell ID | 0000 to FFFF (user-defined) | |
| | time slicing | on/off | |
| | MPE-FEC | on/off | |

DVB-S2/DVB-S2X (xxx-K416 option)

| DVB-S2/DVB-S2X digital standard | | in line with ETSI EN 302 307-1 V1.4.1 and |
|---------------------------------|------------------|---|
| - | | ETSI EN 302 307-2 V1.1.1 |
| General settings | | |
| Number of frames | minimum | 1 |
| | maximum | depends on baseband generator memory |
| VL-SNR mode | | on/off |
| Baseband filter | standard | root cosine |
| | rolloff range | low, high |
| | rolloff factor | 0.05, 0.1, 0.15, 0.2, 0.25, 0.35 |
| Symbol rate | | 100 symbol/s up to 600 Msymbol/s |

| PL scrambler | | on/off |
| Scrambler sequence | | 0 to 6 |

DVB-S2/DVB-S2X Annex E (R&S®SMW-K476 option)

One xxx-K416 option must be installed.

- Generating DVB-S2X Annex E signals
- Support of superframe format 4, 5, 6, 7
- Physical layer header (PLH) in line with the DVB-S2X specification ETSI EN 302 307-2 V1.3.1 Annex E
- Support SF-pilot and special VL-SNR pilots
- · Support of two ways scrambling
- Support of beam-hopping with configurable dwell time

| DVB-S2/DVB-S2X digital standard | | in line with ETSI EN 302 307-2 V1.3.1 |
|--|---|---------------------------------------|
| Note that given parameter ranges may I | pe additionally restricted due to inter-parameter | dependencies. |

| Dwell length | minimum | 0 symbol |

DVB-RCS2 (R&S®SMW-K469 option)

- Generating DVB-RCS2 signals in line with to ETSI EN 301 545-2
- Energy dispersal with predefined scrambling sequence CRC16 and CRC32
- Support of turbo FEC encoder linear modulation and π/2-BPSK, QPSK, 8PSK, 16QAM modulation schemes
- Support of linear modulation and spread spectrum linear modulation bursts
- Support of predefined waveforms in line with ETSI EN 301 545-2 Annex A
- Support of user-defined waveforms
- Support of multi-carrier and multi-section configuration.

| Pilot period | predefined waveform ID | 0 symbol/chip to 768 symbol/chip, settable |
| Pilot block length | predefined waveform ID | 0 symbol/chip to 24 symbol/chip, settable |
| Number of pilot | predefined waveform ID | 0 symbol/chip to 12968 symbol/chip, settable |

DAB

DAB/T-DMB (xxx-K253 or R&S®CMW-KW632 option)

| DAB/T-DMB digital standard | | in line with ETSI EN 300 401 v.1.3.3 |
|------------------------------------|--|---|
| Dr. Dr. Dr. Daghar Starladra | | (with restrictions, see below) |
| Ensemble transport interface | | in line with ETSI ETS 300 799 |
| Ensemble transport interface | | (with restrictions, see below) |
| General settings | | (Will rectifications, ede below) |
| Source data | FIC and CIFs, each filled with | Allo, All1, |
| | i io and on o, caon imou min | PN 15, PN 23 |
| | ETI frames. | ETI file (.ETI); |
| | number of ETI frames to process | This number depends on the number and |
| | named of 211 mamed to proceed | size of streams contained in the ETI file |
| | | and on the free space on the hard disk. |
| Transport mode | for sources other than ETI file | I, II, III, IV |
| | ETI file | specified by ETI frames |
| Baseband filter | standard | cosine, α = 0.1 |
| Signal path parameters | | |
| PN scrambler state | affects all channels | on/off |
| Convolutional coder state | affects all channels; | on/off |
| | if off, missing bits are taken from source | |
| Time interleaver state | affects all channels | on/off |
| DAB-related constraints | | |
| Maximum number of streams/channels | | FIC + 15 streams |
| ETI-related constraints | | |
| ETI type | | ETI (NI, G.703) |
| Stream configuration | must not change within the frames | multiplex configuration |
| | | number of streams |
| | | size of streams |
| | | protection of streams |
| Frame length | | 24 ms |
| Sample rate | | 48 kHz |

OneWeb

The OneWeb software options implement the physical layer in line with the OneWeb satellite communications standard for both forward and reverse link.

OneWeb user-defined signal generation (R&S®SMW-K430 option)

The R&S®SMW-K430 OneWeb user-defined signal generation option is the preferred choice for physical layer testing with highest flexibility and access to all parameters of a standard compliant OneWeb signal.

Key features

Selected reference signals for OneWeb satellite air interface Fully standard compliant OneWeb signal generation

Highest flexibility for customized signal design

Signal generation for forward link (SC-TDM) and reverse link (SC-FDMA)

Define multicarrier scenarios for reverse link

Single carrier scenarios for forward link

| General settings | | | |
|------------------|--------------------------|--|--|
| Sequence length | on the available ARB mem | sequence length can be entered in frames (10 ms each); the maximum length depends on the available ARB memory options and the configured OneWeb settings, e.g. the channel bandwidth and the filter settings | |
| Mode | | predefined and user defined modes | |
| Baseband filter | standard | root cosine with rolloff 0.085 | |
| Link direction | | downlink, uplink | |

| Physical layer mode | downlink | SC-TDM |
|----------------------------------|--|--|
| • | uplink | SC-FDMA |
| Downlink simulation | | |
| General settings | | |
| Channel bandwidth | | 250 MHz |
| Sampling rate | | 230.4 MHz |
| Allocation table | | |
| Code word | up to 2 code words can be configured | 1/1, 1/2, 2/2 |
| Modulation | determines modulation scheme used | QPSK, 8PSK, 16QAM |
| State | sets state of selected allocation | on/off |
| Transmission mode | selects the downlink transmission mode | mode 1OW, mode 2OW |
| UE category | | 1 to 5 |
| Uplink simulation | | |
| General settings | | |
| Channel bandwidth | determines the channel bandwidth used | 20 MHz |
| FFT size | | 2048 |
| Carrier aggregation settings | | |
| Activate carrier aggregation | | on/off |
| Resource allocation uplink | 1 | |
| Select user equipment | Up to 4 UEs can be configured individually | and allocated to the subframes. |
| Number of configurable subframes | determines the number of configurable | up to 40 subframes |
| Ç | uplink subframes; the subframe | · |
| | configurations are used periodically; | |
| | Note: Sounding reference signals are con- | |
| | figured globally and therefore not copied | |
| | here. | |
| Allocation table | | |
| Content type | UE can be set to PUSCH or PUCCH or PUACH | PUSCH, PUCCH, PUACH |
| Modulation | determines the modulation scheme used | QPSK, 8PSK, 16QAM or format 1, 1a, 1b, |
| | if content type is PUSCH or PUACH or | 2, 2a, 2b, 3 |
| | the PUCCH format if content type is | |
| | PUCCH | |
| User equipment configuration | · | · |
| UE ID/n_RNTI | user equipment identifier (n_RNTI) for | 0 to 65535 |
| | selected user equipment | |
| Power | sets power level of selected UE | -80 dB to +10 dB, in steps of 0.001 dB |
| Mode | · | standard, PRACH |

OneWeb reference signals (R&S®SMW-K355 option)

The R&S®SMW-K355 OneWeb reference signals option provides predefined waveforms for a basic RF test without supporting all parameters of a complete standard compliant OneWeb signal. Predefined waveforms are fitting for the development and test of RF components. Parameters like the cell ID are not present which are required to perform e.g. a receiver test.

| Reference waveforms can be played on | HY11-H9951-2_2.0_RL_8PSK_1CC_1cl_736371.1831.wv |

Navigation standards

GPS

GPS (xxx-K244, R&S®CMW-KW620 or R&S®CMA-KW620 option)

| GPS digital standard | | in line with ICD-GPS-200 revision D |
|----------------------------------|---|--|
| General settings | | |
| RF bands | | L1/E1, L2, default: L1/E1 |
| Simulation modes | | |
| Static mode | | generation of a GPS ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine |
| Configurable sample rate | | as a multiple integer factor of the GPS coarse acquisition chip rate |
| Duration of satellite simulation | | maximum simulation time depends on configurable sample rate, Doppler value and size of ARB memory available on the signal generator |
| System time basis | | GPS, UTC, default: GPS |
| Simulation time | | flexible date and time or GPS time configuration with 1 ms resolution |
| Current leap seconds | | automated |
| Marker | | restart 1 PPS 1 PP2S 10 PPS pulse pattern on/off ratio |
| Navigation data source | | All0, All1, pattern (up to 64 bit), PN 9 to PN 23, data lists; real navigation data: almanac file as source for ephemeris and almanac subframes; ephemeris subframes are projected from the almanac subframes |
| Use of spreading code | | on/off |
| GPS satellite configuration | | |
| Signals (chip rates) | | coarse acquisition C/A (1.023 MHz) |
| Modulation | | BPSK (CDMA) |
| State | | on/off |
| Initial code phase | configurable in the absence of real navigation data | 0 chip to 20459.99 chip in steps of 0.01 chip; precision error depends on configurable sample rate |
| Space vehicle ID | | C/A codes: 37 Gold codes, 1023 chip each |
| Doppler shift | | -100 kHz to +100 kHz in steps of 0.01 Hz |
| Navigation data format | | GPS NAV |
| Data rate | | 50 Hz |
| Number of ephemeris pages | | 1 |

Modernized GPS (xxx-K298, R&S®CMW-KW620 or R&S®CMA-KW620 option)

| GPS digital standard | | in line with ICD-GPS-200 revision J (L2C), IS-GPS-705E (L5) |
|----------------------------------|---|--|
| General settings | | |
| RF bands | | L2 for L2C, L5, default: L2 |
| Simulation modes | | |
| Static mode | | generation of a GPS ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the instrument |
| Configurable sample rate | | as a multiple integer factor of the GPS signal chip rate |
| Duration of satellite simulation | | maximum simulation time depends on configurable sample rate, Doppler value and size of ARB memory available on the signal generator |
| System time basis | | GPS, UTC, default: GPS |
| Simulation time | | flexible date and time or GPS time configuration with 1 ms resolution |
| Current leap seconds | | automated |
| Marker | | restart 1 PPS 1 PP2S 10 PPS pulse pattern on/off ratio |
| Navigation data source | | All0, All1, pattern (up to 64 bit), PN 9 to PN 23, data lists; real navigation data: almanac file as source for ephemeris and almanac subframes; ephemeris subframes are projected from the almanac subframes |
| Use of spreading code | | on/off |
| GPS satellite configuration | | |
| Signals (chip rates) | | L2C (1.023 MHz), L5 (10.23 MHz) |
| Modulation | | BPSK for L2C, QPSK for L5 |
| State | | on/off |
| Initial code phase | configurable in the absence of real navigation data | 0 chip to 20459.99 chip in steps of 0.01 chip; precision error depends on configurable sample rate |
| Space vehicle ID | | 37 L2 CM-/L2 CL codes |
| Doppler shift | | -100 kHz to +100 kHz in steps of 0.01 Hz |
| Navigation data format | | GPS CNAV |
| Data rate | | 50 Hz for L2C, 100 Hz for L5 |
| Number of ephemeris pages | | 1 |

Galileo

Galileo (xxx-K266, R&S®CMW-KW622 or R&S®CMA-KW622 option)

| Galileo digital standard | in line with OD SIS ICD, E1 band, |
|--------------------------|---|
| | E5a, E5b and E6 |
| General settings | |
| RF bands | L1/E1, E5a, E5b, E6 |
| Simulation modes | |
| Static mode | generation of a Galileo ARB satellite |
| | signal defined in time with user-definable |
| | initial code phase and Doppler, e.g. for |
| | sensitivity measurements; signal is |
| | continuously repeated on the machine |
| Configurable sample rate | as a multiple integer factor of the Galileo |
| | minimum required sample rate |
| | 12.276 MHz with CBOC(6,1) and |
| | 20.46 MHz with E5a/E5b or E6 |

| D (| | |
|--|-------------------------------------|---|
| Duration of satellite simulation | | maximum simulation time depends on |
| | | configurable sample rate, Doppler value |
| | | and size of ARB memory available on the |
| | | signal generator |
| System time basis | | GST, UTC, default: GST |
| Simulation time | | flexible date and time or GST time |
| | | configuration with 1 ms resolution |
| Current leap seconds | | automated |
| Marker | | restart |

| | | • pulse |
| | | pattern |
| | | on/off ratio |
| Navigation data source | | Allo, All1, pattern (up to 64 bit), |
| Travigation data obtatos | | PN 9 to PN 23, data lists; |
| | | real navigation data (except for E6): |
| | | almanac file as source for ephemeris and |
| | | almanac subframes; ephemeris |
| | | subframes are projected from the |
| | | almanac subframes |
| Llos of approading and | | on/off |
| Use of spreading code | | ON/OH |
| Galileo satellite configuration Signals (chip rates) | | [4 defects (4 000 MHz) |
| Signals (chip rates) | | E1 default (1.023 MHz), |
| Marsh darkar | | E5a/E5b, E6 (10.23 MHz) |
| Modulation | | CBOC(6,1) for E1, QPSK for E5a/E5b, E6 |
| State | | on/off |
| Initial code phase | configurable in the absence of real | 0 chip to 20459.99 chip in steps of |
| | navigation data | 0.01 chip; precision error depends on |
| | | configurable sample rate |
| Space vehicle ID | | E1: 36 memory codes, 4092 chip each; |
| | | E5a/E5b: 36 memory codes, 10230 chip |
| | | each; |
| | | E6: 36 memory codes, 5115 chip each |
| Doppler shift | | -100 kHz to +100 kHz in steps of 0.01 Hz |
| Navigation data format | | Galileo INAV for E1 and E5b, |
| | | FNAV for E5a, All0, All1, pattern, |
| | | PNx and data list for E6 |
| Data rate | | 250 Hz for for E1 and E5b, 50 Hz for E5a, |
| | | 1 kHz for E6 |
| Number of ephemeris pages | | 1 |
| | 1 | |

GLONASS

GLONASS (xxx-K294, R&S®CMW-KW621 or R&S®CMA-KW621 option)

| GLONASS digital standard | in line with ICD-GLONASS version 5.0 |
|----------------------------------|--|
| General settings | |
| RF bands | L1/E1, L2, default: L1/E1 |
| Simulation modes | |
| Static mode | generation of a GLONASS ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine |
| Configurable sample rate | as a multiple integer factor of the GLONASS coarse acquisition chip rate |
| Duration of satellite simulation | maximum simulation time depends on configurable sample rate, Doppler value, satellite frequency number and size of ARB memory available on the signal generator |
| System time basis | GLO, UTC, default: GLO |
| Simulation time | flexible date and time or GLO time configuration with 1 ms resolution |
| Current leap seconds | automated |

| UTC-UTC(SU) | | allows the configuration of UTC-UTC(SU) |
|---------------------------------|-------------------------------------|--|
| 010-010(30) | | phase shift and frequency drift |
| Marker | | restart |
| Walker | | • 1 PPS |
| | | • 1 PP2S |
| | | • 10 PPS |
| | | • pulse |
| | | pattern |
| | | • on/off ratio |
| Navigation data source | | All0, All1, pattern (up to 64 bit), |
| That igation data source | | PN 9 to PN 23, data lists: |
| | | real navigation data: almanac file as |
| | | source for ephemeris and almanac |
| | | subframes; ephemeris automatically |
| | | generated from almanac file |
| Use of spreading code | | on/off |
| GLONASS satellite configuration | | |
| Signals (chip rates) | | coarse acquisition R-C/A (511 kHz) |
| Frequency number | configurable in the absence of real | -7 to +13 |
| | navigation data | |
| Modulation | | BPSK (CDMA) |
| State | | on/off |
| Initial code phase | configurable in the absence of real | 0 chip to 20459.99 chip in steps of |
| | navigation data | 0.01 chip; precision error depends on |
| | | configurable sample rate |
| Space vehicle ID | | 1 CDMA code shared by all GLONASS |
| | | satellites, 511 chip per repetition |
| Doppler shift | | -100 kHz to +100 kHz in steps of 0.01 Hz |
| Navigation data format | | GLONASS NAV |
| Data rate | | 50 Hz, 100 Hz (after applying the |
| | | meander code) |
| Number of ephemeris pages | | 1 |

Modernized GLONASS (xxx-K423 option)

| GLONASS digital standard | in line with GLONASS ICD CDMA open |
|----------------------------------|---|
| | service navigation signal in L3 frequency ² |
| General settings | |
| RF bands | L1 for CDMA L1 ² , L2 for CDMA L2 ² , |
| | L5 for CDMA L3, default: CDMA L3 |
| Simulation modes | · |
| Static mode | generation of a GLONASS ARB satellite |
| | signal defined in time with user-definable |
| | initial code phase and Doppler, e.g. for |
| | sensitivity measurements; signal is |
| One formable and the | continuously repeated on the machine |
| Configurable sample rate | as a multiple integer factor of the |
| | GLONASS signal chip rate |
| Duration of satellite simulation | maximum simulation time depends on |
| | configurable sample rate, Doppler value, |
| | satellite frequency number and size of |
| | ARB memory available on the signal |
| | generator |
| System time basis | GLO, UTC, default: GLO |
| Simulation time | flexible date and time or GLO time |
| | configuration with 1 ms resolution |
| Current leap seconds | automated |
| UTC-UTC(SU) | allows the configuration of UTC-UTC(SU) |
| | phase shift and frequency drift |

The modernized GLONASS signals CDMA L1 and CDMA L2 are experimental. Any compliance to GLONASS ICD CDMA open service navigation signal in L1 frequency band or GLONASS ICD CDMA open service navigation signal in L2 frequency band is not guaranteed.

| | BDS-SIS-ICD-B2a-1.0 BDS-SIS-ICD-B46-4-0 |
| | • BDS-SIS-ICD-B1C-1.0 |
| | BDS-SIS-ICD-B2b-1.0 ³ |
| General settings | |
| RF bands | B1C on L1, B2a and B2b ³ on L5, B3l on L2 |
| Simulation modes | |
| Static mode | generation of a BeiDou ARB satellite |
| | signal defined in time with user-definable |
| | initial code phase and Doppler, e.g. for |
| | sensitivity measurements; signal is |
| | continuously repeated on the machine |
| Configurable sample rate | as a multiple integer factor of the BeiDou |
| | B2a/B2b ³ /B3I chip rate and B1C |
| | minimum sample rate (12.276 MHz) |
| Duration of satellite simulation | maximum simulation time depends on |
| | configurable sample rate, Doppler value |
| | and size of ARB memory available on the |
| | signal generator |
| System time basis | BDT, UTC, default: BDT |
| Simulation time | flexible date and time or BDT time |
| Christian three | configuration with a resolution of 1 ms |
| Current leap seconds | automated |
| Marker | restart |
| | • 1 PPS |
| | • 1 PP2S |
| | • 10 PPS |
| | • pulse |
| | • pattern |
| | on/off ratio |
| Navigation data course | All0, All1, pattern (up to 64 bit), |
| Navigation data source | |
| | PN 9 to PN 23, data lists; |
| | real navigation data (except for B2b ³ |
| | GEO satellites): almanac file as source for |
| | ephemeris and almanac subframes; |
| | ephemeris subframes are projected from |
| | the almanac subframes |

 $^{^{\}rm 3}~$ B2b refers to non-geo satellites 6 to 58, where only the B2b-I component is defined.

| Use of spreading code | | on/off |
|--------------------------------|---|---|
| BeiDou satellite configuration | | |
| Signals (chip rates) | | coarse acquisition B3I-C/A (10.23 MHz), B1C (1.023 MHz), B2a/B2b ³ (10.23 MHz) |
| Modulation | | BPSK for B3I and B2b ³ , QPSK for B2a, BOC for B1C |
| State | | on/off |
| Initial code phase | configurable in the absence of real navigation data | 0 chips to 20459.99 chips in steps of 0.01 chips |
| Space vehicle ID | | 1 to 5: GEO, 6 to 37: MEO/IGSO; 10230 chips each |
| Doppler shift | | -100 kHz to +100 kHz in steps of 0.01 Hz |
| Navigation data format | | BeiDou D1 and D2 |
| Data rate | | 50 Hz and 500 Hz for D1 and D2, respectively; 100 Hz for B1C, 200 Hz for B2a and 1kHz for B2b ³ |
| Number of ephemeris pages | | 1 |

NavIC (IRNSS)

NavIC (IRNSS) (xxx-K297)

| BeiDou digital standard | | in line with ISRO-IRNSS-ICD-SPS-1.1 |
|------------------------------------|---|--|
| General settings | | |
| RF bands | | L5 |
| Simulation modes | | |
| Static mode | | generation of an ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine |
| Configurable sample rate | | as a multiple integer factor of the chip rate |
| Duration of satellite simulation | | maximum simulation time depends on configurable sample rate, Doppler value and size of ARB memory available on the signal generator |
| System time basis | | UTC, NavIC, default: UTC |
| Simulation time | | flexible date and time or BDT time configuration with a resolution of 1 ms |
| Current leap seconds | | automated |
| Marker | | restart 1 PPS 1 PP2S 10 PPS pulse pattern on/off ratio |
| Navigation data source | | All0, All1, pattern (up to 64 bit), PN 9 to PN 23, data lists; real navigation data: almanac file as source for ephemeris and almanac subframes; ephemeris subframes are projected from the almanac subframes |
| Use of spreading code | | on/off |
| NavIC satellite configuration | | |
| Signals (chip rates) Modulation | | coarse acquisition (1.023 MHz) BPSK (CDMA) |
| State | | on/off |
| Initial code phase | configurable in the absence of real navigation data | 0 chips to 20459.99 chips in steps of 0.01 chips |
| Space vehicle ID | | 1 to 14; 1023 chips each |
| Doppler shift | | -100 kHz to +100 kHz in steps of 0.01 Hz |
| Navigation data format | | IRNSS master frame |
| Data rate | | 50 Hz |
| Number of ephemeris pages | | 1 |

Other standards and modulation systems

OFDM

OFDM signal generation (xxx-K414 option)

- Supported modulation types: OFDM, f-OFDM, UFMC, FBMC, GFDM
- Optional discrete Fourier transformation spread OFDM (DFT-s-OFDM) for data allocations
- Flexible physical parameterization of sequence length, total/occupied number of subcarriers, subcarrier spacing, cyclic prefix
- Custom parameters can be set for each individual modulation type
- Customization of predefined filters such as RC, RRC, dirichlet, rectangular, soft truncation
- Support of user-defined filters that were designed by a numeric toolbox, e.g. MATLAB™
- Different users can be configured, each allocated a different data source (e.g. PRBS sequence, data list/pattern)
- Allocation table for flexible assignment of users or individual allocations (each with a different modulation type, data source, power offset and time-frequency resources)
- Custom I/Q sources can be used as an allocation source
- Visualization of resource grid assignments in a global time plan graphic
- Multiple access scheme SCMA to multiplex different users to the same allocation
- OFDM/f-OFDM: allocations can be defined to be used as pilots
- OFDM/f-OFDM: XML configuration file for automatic R&S®FSW-K96 settings configuration is automatically exported

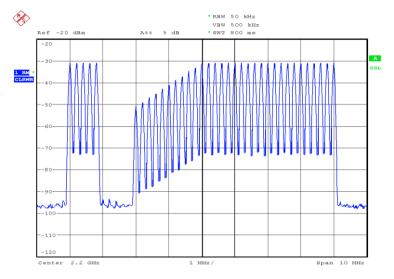

| Modulation type | | OFDM, f-OFDM, UFMC, FBMC, GFDM, DFT-s-OFDM |
|---|------------------------------|--|
| General settings | | |
| Physical settings | | |
| Total number of subcarriers | | 64 to 16384 |
| Occupied number of subcarriers | | 1 to 0.83 x total number of subcarriers |
| Sequence length | 2400 in case of OFDM, f-OFDM | 1 to 150 |
| Subcarrier spacing | | 1 to x Hz, |
| | | x is calculated as follows: total number of |
| | | subcarriers / max. sampling rate (depends on R&S®SMW200A baseband options) |
| Cyclic prefix length | | 1 to total number of subcarriers |
| Cyclic prefix number of symbols | OFDM, f-OFDM | 0 to sequence length |
| Alternative cyclic prefix length | OFDM, f-OFDM | 1 to total number of subcarriers |
| Alternative cyclic prefix number of symbols | OFDM, f-OFDM | 0 to (sequence length – cyclic prefix number of symbols) |
| Filter settings | | |
| Filter type | OFDM | none, user |
| | f-OFDM | soft truncation, user, none |
| | UFMC | Dolph-Chebyshev, user |
| | FBMC | root raised cosine, user |
| | GFDM | raised cosine, root raised cosine, |
| | | Dirichlet, rectangular, user |
| Filter length | OFDM, f-OFDM, UFMC | 1 to 2048 |
| Stopband attenuation | UFMC | -80 dB to +10 dB |
| Rolloff factor | GFDM | 0.0 to 1.0 |
| Windowing method | f-OFDM | none, Hanning, Hamming |
| Cut transient response | f-OFDM, FBMC | on/off |
| Load user filter | OFDM, f-OFDM, UFMC | .dat/.iqw filter coefficient file |
| | selected filter type: user | |
| Modulation-specific configuration | | |
| Number of subbands | OFDM, f-OFDM, UFMC | 1 to occupied number of subcarriers |
| Datablock size | GFDM | 1 to sequence length, must be a common divisor of sequence length |
| Allocation settings | | |
| User | | |
| Data source | | All0, All1, pattern, PNx, data list and Zadoff-Chu |
| Relative power ρ | | -80 dB to +10 dB |
| Allocations | | |
| Number of allocations | | 500 |
| Modulation | | BPSK, QPSK, 16QAM, 64QAM, 256QAM, |
| | | SCMA, custom I/Q, custom constellation |

| Number of symbols | | 1 to sequence length |
|------------------------------|---|---|
| Offset number of subcarriers | | 0 to (occupied number of subcarriers – |
| | | number of subcarriers) |
| Offset of symbols | | 0 to (sequence length – number of |
| | | symbols) |
| Data source | | All0, All1, pattern, PNx, data list and |
| | | I/Q source |
| Relative power ρ | | -80 dB to +10 dB |
| Content type | | data |
| Content type | OFDM, f-OFDM | data, pilot, reserved |
| SCMA configuration | | |
| Spreading factor K | | 4 (fixed) |
| Codebook size M | | 4 (fixed) |
| Number of layers J | | 6 (fixed) |
| SCMA layer mapping | | |
| LayerX | | user0 to user5, one user can be allocated |
| | | to multiple layers |
| Relative power ρ | | 0 dB (fixed) |
| Export path for XML settings | Sets the path for saving OFDM settings in XML format. These files can be used for for | |
| _ | measurements, e.g. with the R&S®VSE-K9 | 96 OFDM vector signal analysis application. |

Multicarrier CW

Multicarrier CW signal generation (xxx-K261 option)

| Signal generation | simulation of unmodulated multicarrier | | |
|----------------------------|---|---|--|
| | signals in arbitrary waveform mode | | |
| Number of carriers | | 1 to 8192 | |
| Carrier spacing | user-selectable, maximum spacing | 1 Hz to 160 MHz | |
| | depending on number of carriers and | | |
| | used Rohde & Schwarz instrument | | |
| Parameters of each carrier | state | on/off | |
| | power | -80 dB to 0 dB | |
| | start phase | 0° to +360° | |
| Crest factor | optimization of crest factor by varying the | optimization of crest factor by varying the start phases of the carrier; available modes: | |
| | off | no optimization, manual entry of phase | |
| | | possible | |
| | chirp | The phases of each carrier are set such | |
| | | that a chirp signal is obtained for the I and | |
| | | Q components. | |
| | target crest | iterative variation of carrier start phases | |
| | | until a presettable crest factor is attained | |
| Marker | | unchanged | |
| | | restart | |
| | | • pulse | |
| | | pattern | |
| | | • ratio | |

Example spectrum of multicarrier CW signal

Noise

Additive white Gaussian noise (AWGN, xxx-K262 or R&S®CMW-KW010 option)

Addition of an AWGN signal of settable bandwidth and settable C/N ratio or E_b/N_0 to a wanted signal.

| Noise | distribution density | Gaussian, statistical, separate for I and Q |
|-------------------------------------|---------------------------------------|---|
| | crest factor | > 18 dB |
| C/N, E _b /N ₀ | setting range | -50 dB to +30 dB |
| | resolution | 0.01 dB |
| System bandwidth | bandwidth for determining noise power | |
| | range (depending on | 1 kHz to 2.4 GHz |
| | Rohde & Schwarz instrument) | |
| | resolution | 1 kHz |

General data

Supported operating systems

Administrator rights are necessary for installation.

| Windows 10 | version 1607 "Anniversary Edition" |
|------------|------------------------------------|
| | and later |
