## Instrument Security Procedures

### Overview of covered instruments

1178588902  
Version 18

**ROHDE & SCHWARZ**  
Make ideas real

This document provides an overview of instrument security procedure documents provided for "Test & measurement" products from Rohde & Schwarz. It covers the instruments of the following product groups:

- Spectrum & signal analyzer
- Network analyzer
- Signal generators
- Oscilloscopes
- Power meter
- Power supplies
- Meters and counters
- Wireless communication tester
- System components, e.g. I/Q data recorder, Open switch and control platform
- Software

<b>1 Overview.....</b>	<b>5</b>
<b>2 Certificate of volatility.....</b>	<b>6</b>
<b>3 Instrument-related security procedures documents.....</b>	<b>7</b>

# 1 Overview

In many cases, it is imperative that Rohde & Schwarz instruments are used in a secured environment. Generally these highly secured environments do not allow any test equipment to leave the area unless it can be proven that no user information leaves with the test equipment. Security concerns can arise when devices need to leave a secured area, e.g., to be calibrated or serviced.

The Instrument Security Procedure documents for the Rohde & Schwarz instruments describe the types of memory and their usage in the Rohde & Schwarz instruments. They provide a statement regarding the volatility of all memory types and specify the steps required to declassify an instrument through memory sanitization procedures.

You can directly access the specific instrument security procedure document by selecting the product in the table, and following the hyperlink.

## 2 Certificate of volatility

Before you can remove an Rohde & Schwarz instrument from a secured area (for example to perform service or calibration), all classified user data needs to be removed. You can declassify the Rohde & Schwarz instrument as described in the section “Instrument Declassification” of the Instrument Security Procedure document for that specific Rohde & Schwarz instrument.

Rohde & Schwarz certifies that after performing the described instrument declassification procedure that no user data is left on the Rohde & Schwarz instrument.

## 3 Instrument-related security procedures documents

### 3.1 Signal and spectrum analyzer
